

Parenchyma-sparing pancreatic head resection - Beger et al.

Supplemental Material

Figures S2A - S2C

Fig. S2A – Partial DPPHR (DPPHRp, Type I)
(192 patients)

Partial pancreatic head resection;
reconstruction with side-to-side
pancreaticojejunostomosis

Fig. S2B – Total DPPHR (DPPHRT, Type II)
(290 patients) with preservation of the
duodenum and the intrapancreatic
common bile duct; reconstruction using
the first jejunal loop

Fig. S2C – Total DPPHRT (DPPHRT + sd, Type III) (172 patients) Total DPPHR with segment
resection (sd) of the peripapillary duodenum
and resection of the intrapancreatic common
bile duct. Reconstruction with biliary
anastomosis (e-s) duodenum anastomosis (e-
e) and
Pancreatico-jejunum anastomosis (e-s).
