Correction: Evaluation of pulmonary dysfunctions and acid–base imbalances induced by *Chlamydia psittaci* in a bovine model of respiratory infection

Carola Ostermann^{1†}, Susanna Linde^{1†}, Christiane Siegling-Vitakis² and Petra Reinhold^{1*}

Correction

Following publication of our article [1], we noticed the following mistakes:

Firstly, the numbers in the headings of the additional files have been reversed. In Additional file 2, cell A1 should read “*Additional file 2: Concentrations of plasma glucose, L-lactate, sodium, potassium, chloride, and calculated strong ion difference (SID)*” rather than “*Additional file 3: Concentrations of plasma glucose, L-lactate, sodium, potassium, chloride, and calculated strong ion difference (SID)*”. In Additional File 3, cell A1 should read “*Additional file 3: Concentrations of inorganic phosphate and total protein, results of electrophoresis, and calculated values for (Atot)*” rather than “*Additional file 2: Concentrations of inorganic phosphate and total protein, results of electrophoresis, and calculated values for (Atot)*”.

Secondly, in the legend of Figure 2 the term “d a.i.” is not an abbreviation of “days after inoculation” and should instead read “days *ante inoculationem*”.
