

Neuroprotective Effects of Melatonin and Celecoxib against Ethanol-Induced Neurodegeneration: A Computational and Pharmacological Approach [Corrigendum]

Al Kury LT, Zeb A, Abidin ZU, et al. *Drug Des Devel Ther.* 2019;13:2715–2727.

In the published article, there was an error in Figure 4B on page 2723. The image for Ethanol+celecoxib+mela (Piriform-PIR) was used mistakenly leading to a duplication with the Control (Piriform-PIR) images. A new image for Ethanol+celecoxib+mela (Piriform-PIR) was found from the original data and used as a replacement. The authors apologize for this error and state that this does not change the quality and scientific conclusions of the article.

The correct Figure 4 is as follows.

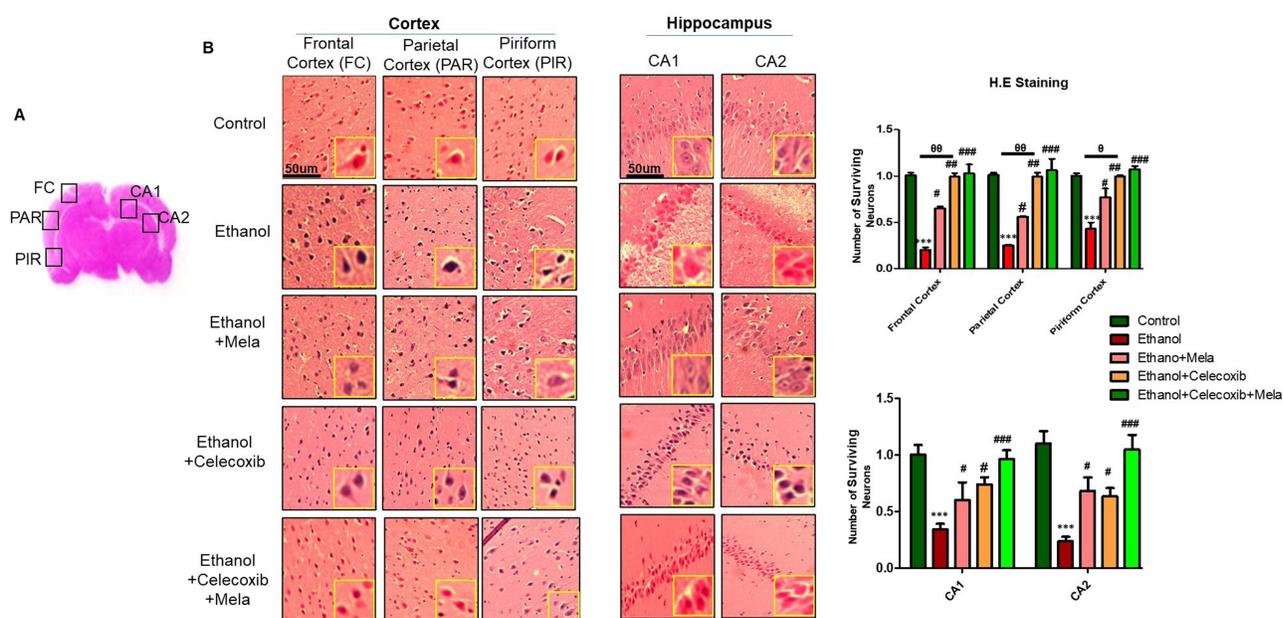

Figure 4 Effect of melatonin and celecoxib on neuronal cell death.

Notes: (A) Regions of interest analyzed; (B) H&E staining showing the extent of surviving neurons in the cortex and hippocampus. Bar 50 μ m, magnification 20 \times , n=5/group. Surviving neurons were marked by cytoplasmic swelling, scalloped neurons with intense cytoplasmic eosinophilia, and nuclear basophilia. These changes resulted from neuronal necrosis. Some cells had a shrunken appearance, along with pyknotic nuclei. Intensive neuropil vacuolation can be seen in the ethanol-only group. *Significant difference relative to control; #Significant difference relative to ethanol group; #Significant difference relative to ethanol + melatonin. Data presented as means \pm SEM. Data analyzed by one-way ANOVA followed by post hoc Bonferroni multiple comparison using GraphPad Prism 5 software. *** $P < 0.001$; ## $P < 0.05$; ### $P < 0.01$.

Drug Design, Development and Therapy

Dovepress

Publish your work in this journal

Drug Design, Development and Therapy is an international, peer-reviewed open-access journal that spans the spectrum of drug design and development through to clinical applications. Clinical outcomes, patient safety, and programs for the development and effective, safe, and sustained use of medicines are a feature of the journal, which has also been accepted for indexing on PubMed Central. The manuscript management system is completely online and includes a very quick and fair peer-review system, which is all easy to use. Visit <http://www.dovepress.com/testimonials.php> to read real quotes from published authors.
