Supplementary Figure 1. Alphafold models of Zorya I and II accessory components. a, Alphafold model and related PAE error for the predicted structure of ZorC. **b**, Alphafold model and related PAE error for the predicted structure of ZorD. ZorD N-terminal and C-terminal domains highlighted in different shades as shown in panel b. The C-terminal domain of ZorD was aligned with its closest homologue, identified through a Foldseek search (PDB: 8ATF, nucleosome-bound Ino80 ATPase).**c,** Alphafold model and related PAE error for the predicted structure of ZorE. $ZorE_{187\text{-}251}$ residues are highlighted in lighter orange. A Foldseek search showed that $ZorE_{187\text{-}251}$ residues align with the DotN nuclease domain (PDB: 5X1H)

Supplementary Figure 3. a, Efficiency of plating (EOP) measurement for *E. coli* MT56 carrying empty vector (VC, pGM39) or the same plasmid encoding Zorya I, ZorA I, ZorB I, ZorABC, ZorABD, ZorBDC, ZorAB I, ZorCD, ZorB D24N, ZorA IΔaa237-696 and ZorB IΔaa43-287 when infected with phage ϕMav. Points show mean +/- SEM (n = 3 biological replicates). **b,** Efficiency of plating (EOP) measurement for *E. coli* MT56 carrying empty vector (VC, pGM39) or the same plasmid encoding Zorya II, ZorA II, ZorB II, ZorAB II, ZorE, ZorB D24N, ZorA IΔaa106-550 and ZorB IΔaa45-235 when infected with phage ϕCS16F. Points show mean +/- SEM (n = 3 biological replicates). **c,** Efficiency of plating (EOP) measurement for *E. coli* MT56 harbouring empty vector (VC, pGM39), the same plasmid encoding wild-type Zorya I or a version of Zorya I where single point mutations were introduced in ZorA I or ZorB I, as indicated in panel **c,** when infected with ϕAlma**. d,** Efficiency of plating (EOP) measurement for *E. coli* MT56 expressing empty vector (VC, pGM39), the same plasmid encoding wild-type Zorya II or a version of Zorya II carrying point mutations in ZorA II or ZorB II, as indicated in panel **d,** when infected with ϕT7**.** Induction of each construct was performed by addition of 0.02% *L*-Rhamnose. For all panels, points show mean +/- SEM (n = 3 biological replicates). Statistical significance for each panel was calculated with Graphpad applying a one-way ANOVA with Dunnett's multiple comparison test. No significance was detected, unless indicated (*p≤ 0.05). For Panel **h** and **i,** the statistical analysis results is reported in Table S4.

Supplementary Figure 6. ZorE is a monomeric nickase with variable effects of metals. **a,** Efficiency of plating (EOP) measurement for *E. coli* MT56 carrying empty vector (VC, pGM39) or the same plasmid encoding Zorya II, ZorA II, ZorB II, ZorAB II, ZorE or ZorAII+ZorBII+ZorE-Strep when infected with ϕT7. **b,** SDS-PAGE of the final purified ZorE-Strep showing a single band at the expected size. **c,** Size exclusion chromatogram showing the expected elution volume of monomeric ZorE-Strep based on molecular weight (dashed line) and the peak collected for the final purified ZorE-Strep (blue). **d,** Mass photometry (Refeyn) for the ZorE-Strep sample shows a single population in solution representing monomeric ZorE-Strep. **e,** ZorE was titrated against constant *E.* coli MG1655 gDNA (200 ng). Reactions were incubated for 60 min at 37 °C in the presence of 5 mM Mg^{2+}. **f,** Densitometry analysis of nicking of *E.* coli MG1655 gDNA by ZorE as shown in **panel e**. **g,** ZorE was titrated against constant ϕT7and ϕMak gDNA (200 ng). Reactions were incubated for 60 min at 37 °C in the presence of 5 mM Mg^{2+}. **h,** Densitometry analysis of nicking of ϕT7 and ϕMak gDNA by ZorE as shown in **panel g**. **i,** ZorE (768 nM) was incubated with supercoiled pSG483 plasmid DNA (6 nM) in presence of various metal cations. Cations were tested at 5, 25, and 50 mM. Reactions were incubated for 60 min at 37 °C. **j,** Densitometry analysis of nicking of pSG483 by ZorE in presence of various cations as shown in **panel i.** **k,** ZorE (768 nM) was incubated with linearised plasmid pSG483 (6 nM) at 37 °C for 0 to 60 min with 5 mM Mg^{2+}. **l,** Densitometry analysis of nicking of linear plasmid pSG483 by ZorE as shown in **panel k**. **m,** ZorE (768 nM) was incubated with nicked plasmid pSG483 (6 nM) at 37 °C for 0 to 60 min with 5 mM Mg^{2+}. **n,** Densitometry analysis of nicking of nicked plasmid pSG483 by ZorE as shown in **panel m**. For panels **e,g,i,k,m,** reactions were stopped by the addition of EDTA and SDS and products were analysed by gel electrophoresis in a 1x TAE, 1.4% agarose gel, post-stained with ethidium bromide. In all gels, control lanes represent forms of plasmid pSG483; R, relaxed (multiple topoisomers); N, nicked; L, linear; S, supercoiled. For panels **f,h,j,l,n** densitometry was performed using ImageJ (version 1.54g) with background subtracted and band intensity measured in triplicate. The percentage nicked, linear, and supercoiled pSG483 DNA of the total pSG483 DNA per lane was determined by calculating the average intensity (n = 3) of each lanes' nicked, linear, and supercoiled bands, respectively. as a percentage of the total average intensity of all bands per lane. Relative band intensity was determined by normalising the average (n = 3) intensity of the "0 μM ZorE" lane to 100% and taking the average intensity of the subsequent lanes' bands as a percentage of the "0 μM ZorE" lane. Error bars represent the standard error of the mean of triplicate data.

Supplementary Figure 7. Zorya I and Zorya II do not alter the membrane potential and metabolism of cells. a, Analysis of *E. coli* MT56 carrying empty vector (VC, pGM39) or the same plasmid encoding Zorya I or Zorya II by flow cytometry following induction with 0.2% *L*-Rhamnose. As a positive control, cells carrying VC were treated with 5 µg/mL of polymyxin B. Staining with $DiBAC_4(3)$ was used to assess loss of membrane potential. The image is representative of 3 independent experiments. **b-c,** Kinetic reads of **(b)** $DiBAC_4(3)$ fluorescence or **(c)** propidium iodide fluorescence for *E. coli* MT56 carrying empty vector (VC, pGM39) or a plasmid encoding Zorya I when infected with ϕAlma, or for cells harbouring VC or a plasmid encoding Zorya II when infected with ϕMak. Fluorescence was recorded every 20 min over the course of 12 hr. **d,** Strains as in **panel a-c,** were grown for 2 hrs at 37 °C in presence of 0.2% *L*-Rhamnose and subsequently treated with CellTiter Blue stain (Promega) to assess changes in their metabolism. Cells carrying VC were incubated 10 min at 100 °C as a positive control. Changes in the metabolism of each sample was assessed by measuring the ratio fluorescence at 560nm and at 590nm. For panels **b-d,** points show mean +/- SEM (n = 3 biological replicates).**e,** Quantification of the integrated density (sum of pixel values over single-cells area) for DAPI staining in Figure **5g.** The integrated density was quantified using Fiji. Point show mean +/- SEM (n = 100 cells). Statistical analysis was performed using non-parametric Kruskal-Wallis Test in GraphPad 9. Significance was reported as $p \leq 0.05$. **f-g** *E. coli* MT56 harbouring empty vector (VC, pGM39) or the same plasmid encoding Zorya I or Zorya II were grown until exponential phase and then infected with MOI 0.1 of ϕAlma (**f)** or ϕT7 **(g).** Cells were retrieved after first burst event and total genomic DNA extracted. Genomic DNA was subjected to neutral and alkaline treatment, as described in Material and Methods, and subjected to electrophoretic analysis. For panels **f-g**, images are representative of three independent experiments.

Supplementary Figure 10. Model-to-map fits of key structural elements.a, Model overlayed with density for *Shewanella* sp. strain ANA-3 type I $ZorA_5B_2$ complex, depicting (i) the ZorB peptidoglycan-binding domain (composite map; contour level of 10.8), (ii) a slice through of the core complex shown at lower (left) or higher (right) magnification (composite map; contour level of 10.8) or (iii) the sodium-binding sites (left, site 1; right, site 2) at two viewing angles (sharpened map; contour level of 1.22). **b,** Model overlayed with density for *Sulfuricurvum kujiense* type II $ZorA_5B_2$ complex, depicting (i) the ZorB peptidoglycan-binding domain or (ii) a slice through of the core complex shown at lower (left) or higher (right) magnification (all depictions used a map contour level of 0.25)

Supplementary Table 1. Strains and plasmids used in this study

Name	Description	Reference
Strains		
Escherichia coli		
Mt56(DE3)	BL21(DE3) derivative optimised for expression of membrane proteins	[1]
DH5α	Cloning strain, F– φ80lacZΔM15 Δ(lacZYA-argF)U169 recA1 endA1 hsdR17(rK–, mK+) phoA supE44 λ–thi-1 gyrA96 relA1	New England Biolabs
Serratia marcescens		
Serratia marcescens		
S. marcescens ATCC 274	*S. marcescens* strain ATCC 274	NCTC
Plasmids		
pT12-ecMotAB	Rhamnose-inducible expression vector (Kn^R); carrying the coding sequence for MotAB from *E.coli* W. A TEV cleavage site and 2xStrepII tag are encoded directly downstream and in-frame with MotB.	[2]
pGM39	Rhamnose-inducible expression vector (Kn^R) where the ecMotAB-TEV-2xStrepII tag insert has been deleted by KLD, to leave an empty multiple cloning site.	
pGM15	Coding sequence of ZorAB II from *Sulfuricurvum kujiense* DSM 16994 (SULKU_RS11880 and SULKU_RS11885) in	This study

	pT12-derived plasmid. Insert was cloned in pT12-ecMotAB to replace ecMotAB and in frame with the TEV site and 2xStrepII tag	
pGM99	Coding sequence of Zorya I operon from *Shewanella sp.* ANA-3 (SHEWANA3_RS19785 SHEWANA3_RS19790 and SHEWANA3_RS19795) in pGM39	This study
pGM54	Coding sequence of ZorAB I from *Shewanella sp.* ANA-3 in pT12-derived plasmid. Insert was cloned in pT12-ecMotAB to replace ecMotAB and in frame with the TEV site and 2xStrepII tag	This study
pGM23	Coding sequence of Zorya II operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39	This study
pGM35	Coding sequence of ZorBE operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39	This study
pGM36	Coding sequence of ZorAE operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39	This study
pGM37	Coding sequence of ZorE from *E. coli* ATCC 8739 in pGM39	This study
pGM38	Coding sequence of ZorAB II from *E. coli* ATCC 8739 in pGM39	This study

pGM46	Coding sequence of Zorya II from *E. coli* ATCC 8739 in pGM39, with ZorB II carrying a D24N mutation.	This study
pGM55	Coding sequence of Zorya II from *E. coli* ATCC 8739 in pGM39, with ZorA II carrying a deletion from aa106 to aa550(cytoplasmic domain)	This study
pGM56	Coding sequence of Zorya II from *E. coli* ATCC 8739 in pGM39, with ZorB II carrying a deletion from aa45 to aa235 (periplasmic domain)	This study
pGM70	Coding sequence of Zorya I from *S. marcescens* ATCC 274(SMATCC274_RS21230, SMATCC274_RS21235 SMATCC274_RS21240 and SMATCC274_RS21245) in pGM39	This study
pGM85	Coding sequence of ZorCD from *S. marcescens* ATCC 274 in pGM39	This study
pGM86	Coding sequence of ZorAB I from *S. marcescens* ATCC 274 in pGM39	This study
pGM124	Coding sequence of ZorABC from *S. marcescens* ATCC 274 in pGM39	This study
pGM125	Coding sequence of ZorBCD from *S. marcescens* ATCC 274 in pGM39	This study
pGM140	Coding sequence of Zorya I *S. marcescens* ATCC 274 in pGM39, with ZorB I carrying a deletion a D24N mutation	This study
pGM141	Coding sequence of ZorABD from *S. marcescens* ATCC 274 in pGM39	This study
pGM142	Coding sequence of ZorACD from *S. marcescens* ATCC 274 in pGM39	This study

pGM223	Coding sequence of Zorya I *S. marcescens* ATCC 274 in pGM39, with ZorA I carrying a deletion from aa237 to aa678 (cytoplasmic domain)	This study
pGM224	Coding sequence of Zorya I *S. marcescens* ATCC 274 in pGM39, with ZorB I carrying a deletion from aa43 to aa287 (periplasmic domain)	This study
pGM59	Coding sequence of Zorya II *Klebsiella oxytoca* 571.31(G0D99_RS19745, G0D99_RS19740 and G0D99_RS19735) in pGM39	This study
pGM60	Coding sequence of Zorya II *Legionella lansingensis* NCTC12830 (CKV79_RS08030, CKV79_RS08025 and CKV79_RS08020) in pGM39	This study
pGM61	Coding sequence of Zorya II S. *marcescens* UMH9 (BVG96_RS22930, BVG96_RS22925 and BVG96_RS22920) in pGM39	This study
pGM62	Coding sequence of Zorya II *E. coli* KTE66 in pGM39	This study
pGM63	Coding sequence of Zorya II *Pseudomonas jinjuensis* NBRC10347 in pGM39	This study
pGM64	Coding sequence of Zorya II *S. marcescens* strain AS012322 in pGM39	This study
pGM65	Coding sequence of Zorya II *Shewanella bicestrii* strain JAB-1(CF168_RS11660, CF168_RS11655 and CF168_RS11650) in pGM39	This study
pGM94	Coding sequence of ZorCD from *S. marcescens* ATCC 274 cloned downstream of ZorAB II (from *S. marcescens* UMH9) in pGM39	This study

pGM98	Coding sequence of ZorAB I from *S. marcescens* ATCC 274 and ZorE from *S. marcescens* UMH9) in pGM39	This study
pGM143	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a A210P mutation	This study
pGM144	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a V237A mutation	This study
pGM145	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a Q244A mutation	This study
pGM146	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a I282A mutation	This study
pGM147	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a T309A mutation	This study
pGM148	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a L346A mutation	This study
pGM149	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a E366A mutation	This study
pGM150	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorA II carrying a E402A mutation	This study

pGM152	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a E139A mutation	This study
pGM153	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a H141A mutation	This study
pGM154	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a T142A mutation	This study
pGM155	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a S143A mutation	This study
pGM156	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a D145A mutation	This study
pGM157	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a K188A mutation	This study
pGM158	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a Y196A mutation	This study
pGM159	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a R215A mutation	This study
pGM160	Coding sequence of Zorya II *E.coli* ATCC 8739 in pGM39, with ZorB II carrying a I232A mutation	This study

pGM161	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a E267A mutation	This study
pGM162	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a A280P mutation	This study
pGM163	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA I carrying a S302P mutation	This study
pGM164	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a S319A mutation	This study
pGM165	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a L361A mutation	This study
pGM166	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a Q392A mutation	This study
pGM167	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA I carrying a L423A mutation	This study
pGM168	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA II carrying a K444A mutation	This study
pGM169	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA I carrying a E481A mutation	This study

pGM170	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a A520P mutation	This study
pGM171	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorA I carrying a S598A mutation	This study
pGM172	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA I carrying a Y631A mutation	This study
pGM173	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorA I carrying a V664A mutation	This study
pGM176	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorB I carrying a H186A mutation	This study
pGM180	Coding sequence of Zorya I *S. marcescens* ATCC274in pGM39, with ZorB II carrying a L199A mutation	This study
pGM181	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorB II carrying a R203A mutation	This study
pGM183	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorB II carrying a R254A mutation	This study
pGM185	Coding sequence of Zorya I *S. marcescens* ATCC274 in pGM39, with ZorB II carrying a R259A mutation	This study
pGM29	Coding sequence of ZorE from *E. coli* ATCC 8739 in pT12-derived plasmid. Insert was cloned in pT12-ecMotAB to replace ecMotAB	This study

	and in frame with the TEV site and 2xStrepII tag	
pGM287	Coding sequence of ZorBI $_{165-287}$ from *S. marcescens* ATCC 274 in pT12-derived plasmid. Insert was cloned in pT12-ecMotAB to replace ecMotAB and in frame with the TEV site and 2xStrepII tag	This study
pGM288	Coding sequence of ZorBII$_{115-235}$ from *E. coli* ATCC 8739 in pT12-derived plasmid. Insert was cloned in pT12-ecMotAB to replace ecMotAB and in frame with the TEV site and 2xStrepII tag	This study
pGM301	Coding sequence of ZorBII$_{115-235}$ carrying the S143A point mutation. Plasmid derived from pGM288.	This study
pGM304	Coding sequence of ZorBII$_{115-235}$ carrying the R215A point mutation. Plasmid derived from pGM288.	This study
pGM306	Coding sequence of ZorBI $_{165-287}$ carrying the L199A point mutation. Plasmid derived from pGM287.	This study
pGM307	Coding sequence of ZorBI $_{165-287}$ carrying the H186A point mutation. Plasmid derived from pGM287.	This study
pGM309	Coding sequence of ZorBI $_{165-287}$ carrying the R254A point mutation. Plasmid derived from pGM287.	This study
pGM311	Coding sequence of ZorBI $_{165-287}$ carrying the R203A point mutation. Plasmid derived from pGM287.	This study

pGM312	Coding sequence of ZorBI $_{165-287}$ carrying the R259A point mutation. Plasmid derived from pGM287.	This study
pGM328	Coding sequence of ZorBII$_{115-235}$ carrying the H141A point mutation. Plasmid derived from pGM288.	This study
pGM329	Coding sequence of ZorBII$_{115-235}$ carrying the R230A point mutation. Plasmid derived from pGM288.	This study
pGM41	Coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pT12. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM289	Coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pT12. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM290	Coding sequence ZorA followed by ZorE fused to a His6x tag in pT12. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM291	Coding sequence of ZorE fused to a His6x tag in pT12. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM67	Coding sequence of ZorB fused to a TEV site and 2xStrepII tag inserted in its native position in the Zorya II operon in pGM23.	This study
pSUPROM	Low copy plasmid carrying a constitutive Tat promoter and a Kanamycin resistance gene.	[3]
pGM196	Coding sequence of Zorya II from *E. coli* ATCC 8739, with its own promoter and terminator, cloned in pSUPROM. Cloning designed to	This study

	remove the Tat promoter from pSUPROM and replace with Zorya II own promoter.	
pGM336	pSUPROM derivative where Tat promoter has been replaced by Zorya II promoter. Promoter sequence obtained from *E. coli* ATCC 8739	This study
pGM337	Coding sequence of ZorBE in pGM336. . Sequences were amplified from *E. coli* ATCC 8739	This study
pGM338	Coding sequence of ZorAE in pGM336. . Sequences were amplified from *E. coli* ATCC 8739	This study
pGM339	Coding sequence of ZorE in pGM336. . Sequences were amplified from *E. coli* ATCC 8739	This study
pGM340	Coding sequence of ZorAB in pGM336. . Sequences were amplified from *E. coli* ATCC 8739	This study
pGM341	Coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pGM336. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM342	Coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pGM336. Sequences were amplified from *E. coli* ATCC 8739	This study
pGM343	Coding sequence of ZorA followed by ZorE fused to a His6x tag in pGM336. Sequences were amplified from *E. coli* ATCC 8739	This study

pGM344	Coding sequence of ZorE fused to a His6x tag in pGM336. Sequences were amplified from *E. coli* ATCC 8739	This study

Supplementary Table 2. Oligonucleotide primers and additional details for plasmid construction.

Plasmid	Sequence of relevant primers (5'-3')[a]	Description
pGM39	AACAGAAAAACCGACTAG	Forward primer delete ecMotAB-TEV-StrepII tag to generate empty vector by KLD
	GGTGAATTCCTCCTGAATTTCATTACG	Reverse primer delete ecMotAB-TEV-StrepII tag to generate empty vector by KLD
pGM15	GAAAACCTGTACTTCCAGGGTCAAT	Forward primer to clone ZorAB II from *Sulfuricurvum kujiense* DSM 16994 (SULKU_RS11880 and SULKU_RS11885) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	GGTGAATTCCTCCTGAATTTCATTACG AC	Reverse primer to clone ZorAB II from *Sulfuricurvum kujiense* DSM 16994 (SULKU_RS11880 and SULKU_RS11885) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	TTTTTAGACTGGTCGTAATGAAATTCAG GAGGAATTCACCGTGATTCATAATATG GCCTATTTCGGAGTCG	Forward primer to clone ZorAB II from *Sulfuricurvum kujiense* DSM 16994 (SULKU_RS11880 and SULKU_RS11885) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA

		Assembly. Primer is used to amplify genes of interest
	GGCTCCAGCTCCCGAATTGACCCTGG AAGTACAGGTTTTCTTTTTCTACTATAT CGGCGACTTTACGTTCAATG	Reverse primer to clone ZorAB II from *Sulfuricurvum kujiense* DSM 16994 (SULKU_RS11880 and SULKU_RS11885) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM54	GAAAACCTGTACTTCCAGGGTCAAT	Forward primer to clone ZorAB I Shewanella sp. ANA-3 (SHEWANA3_RS19785 SHEWANA3_RS19790 and SHEWANA3_RS19795) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	GGTGAATTCCTCCTGAATTTCATTACG AC	Reverse primer to clone ZorAB I Shewanella sp. ANA-3 (SHEWANA3_RS19785 SHEWANA3_RS19790 and SHEWANA3_RS19795) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCATGGCAA CAGAAAGACAAATTG	Forward primer to clone ZorAB I Shewanella sp. ANA-3 (SHEWANA3_RS19785 SHEWANA3_RS19790) in pT12-derived plasmid in frame with a C-

		term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	CCCTGGAAGTACAGGTTTTCAACATTC TTCGCTTTTTCG	Reverse primer to clone ZorAB I Shewanella sp. ANA-3 (SHEWANA3_RS19785 SHEWANA3_RS19790 and SHEWANA3_RS19795) in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM99	AACATTCTTCGCTTTTTCG	Forward primer to clone ZorCD operon from Shewanella sp. ANA-3 in pGM54 by NEBuilder HiFi DNA Assembly, removing the Strep II tag. Primer is used to linearise vector
	AACAGAAAAACCGACTAG	Reverse primer to clone ZorCD operon from Shewanella sp. ANA-3 in pGM54 by NEBuilder HiFi DNA Assembly, removing the Strep II tag. Primer is used to linearise vector
	ACGAAAAAGCGAAGAATGTTTAAAGCA TGTGCGTGGAG	Forward primer to clone ZorCD operon from Shewanella sp. ANA-3 in pGM54 by NEBuilder HiFi DNA Assembly, removing the Strep II tag. Primer is used to amplify genes of interest
	AGCTAGTCGGTTTTTCTGTTCTAACGA ACTACATATCGTTG	Reverse primer to clone ZorCD operon from Shewanella sp. ANA-3 in pGM54 by NEBuilder HiFi DNA Assembly, removing the Strep II tag.

		Primer is used to amplify genes of interest
pGM23	GGTGAATTCCTCCTGAATTTCATTACG	Forward primer to clone Zorya II operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	TAAAACAGAAAAACCGACTAGCTTGG	Reverse primer to clone Zorya II operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCATGTTAG CGCAGCTTTTTG	Forward primer to clone Zorya II operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	AGGATCCCCGGGTACCCTAGTTGAGA CTCGCCAACCATGGGC	Reverse primer to clone Zorya II operon from *E. coli* ATCC 8739 (ECOLC_RS20900, ECOLC_RS20905 and ECOLC_RS20910) in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest

pGM35	TCGATCATGGATAAGATTATAG	Forward primer delete ZorA from pGM23 by KLD
	GGTGAATTCCTCCTGAATTTCATTACG	Reverse primer delete ZorA from pGM23 by KLD
pGM36	GAGATGAAATTATCTATC	Forward primer delete ZorB from pGM23 by KLD
	GATCGATTACCCTCGATG	Reverse primer delete ZorB from pGM23 by KLD
pGM37	GAGATGAAATTATCTATC	Forward primer delete ZorAB from pGM23 by KLD
	GGTGAATTCCTCCTGAATTTCATTACG	Reverse primer delete ZorAB from pGM23 by KLD
pGM38	AACAGAAAAACCGACTAG	Forward primer delete ZorE from pGM23 by KLD
	GATTATTCAGGAGTAAGAG	Reverse primer delete ZorE from pGM23 by KLD
pGM46	AACCTAATGGCAGGGCTGATGATG	Forward primer introduce a D24N mutation in ZorB in pGM23 by KLD
	TGACATGGATACCCAATGTTC	Reverse primer introduce a D24N mutation in ZorB in pGM23 by KLD
pGM55	AAATAAAATGGCAAAAAAC	Forward primer to delete a aa106-550 in ZorA in pGM23 by KLD
	TAATCGATCATGGATAAGATTATAG	Reverse primer to delete a aa106-550 in ZorA in pGM23 by KLD
pGM70	GGTGAATTCCTCCTGAATTTCATTACG	Forward primer to clone Zorya I from *S. marcescens* ATCC 274(SMATCC274_RS21230, SMATCC274_RS21235 SMATCC274_RS21240 and SMATCC274_RS21245 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector

	TAAAACAGAAAAACCGACTAGCTTGG	Reverse primer to clone Zorya I from *S. marcescens* ATCC 274(SMATCC274_RS21230, SMATCC274_RS21235 SMATCC274_RS21240 and SMATCC274_RS21245 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCATGGATTCGCTGCTGCTTC	Forward primer to clone Zorya I from *S. marcescens* ATCC 274(SMATCC274_RS21230, SMATCC274_RS21235 SMATCC274_RS21240 and SMATCC274_RS21245 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	AGCTAGTCGGTTTTTCTGTTCTAACTGATTCGATATGAACC	Reverse primer to clone Zorya I from *S. marcescens* ATCC 274(SMATCC274_RS21230, SMATCC274_RS21235 SMATCC274_RS21240 and SMATCC274_RS21245 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM85	GGTGAATTCCTCCTGAATTTCATTAC	Forward primer delete ZorAB from pGM70 by KLD
	ATGAAATTAAGCGATATC	Reverse primer delete ZorAB from pGM70 by KLD
pGM86	TCATAGCGGCCTCTTCTTCAG	Forward primer delete ZorAB from pGM70 by KLD

	AACAGAAAAACCGACTAGCTTGGCTG	Reverse primer delete ZorAB from pGM70 by KLD
pGM124	GGTGAATTCCTCCTGAATTTCATTACG	Forward primer to clone ZorABC from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	TAAAACAGAAAAACCGACTAGCTTGG	Reverse primer to clone ZorABC from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCATGGATTCGCTGCTGCTTC	Forward primer to clone ZorABC from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	AGCTAGTCGGTTTTTCTGTTTCATGACAGATACTCAATTTGTTCAC	Reverse primer to clone ZorABC from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM125	GGTGAATTCCTCCTGAATTTCATTACG	Forward primer to clone ZorBCD from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	TAAAACAGAAAAACCGACTAGCTTGG	Reverse primer to clone ZorBCD from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector

	AAATTCAGGAGGAATTCACCATGAGAG CCAACGCCAGTC	Forward primer to clone ZorBCD from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	AGCTAGTCGGTTTTTCTGTTCTAACTG ATTCGATATGAACCGTCATC	Reverse primer to clone ZorBCD from *S. marcescens* ATCC 274 in pGM39 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM140	AATATGACGGTCAGCTTTCTTTTTATTG TTATG	Forward primer to introduce aD24N mutation in ZorB in pGM70 by NEBuilder HiFi DNA Assembly.
	GAAAGCTGACCGTCATATTTGTCATTG AGACAAAAAC	Reverse primer to introduce aD24N mutation in ZorB in pGM70 by NEBuilder HiFi DNA Assembly.
pGM141	TCATAGCGGCCTCTTCTTC	Forward primer to clone ZorD from *S. marcescens* ATCC 274 downstream of ZorAB I in pGM86 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AACAGAAAAACCGACTAGCTTGGCTG	Reverse primer to clone ZorD from *S. marcescens* ATCC 274 downstream of ZorAB I in pGM86 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	tgaagaagaggccgctatgaATGACATTTGCTT TCAATCATAATG	Forward primer to clone ZorD from *S. marcescens* ATCC 274 downstream of ZorAB I in pGM86 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest

	agctagtcggtttttctgttCTAACTGATTCGATATGAACC	Reverse primer to clone ZorD from *S. marcescens* ATCC 274 downstream of ZorAB I in pGM86 by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM142	ATGAAATTAAGCGATATCTTCC	Forward primer to clone ZorA I from *S. marcescens* ATCC 274 upstream of ZorCD in pGM85 by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector

pGM29	GGTGAATTCCTCCTGAATTTCATTAC	Forward primer to clone ZorE from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector

	GAAAACCTGTACTTCCAGGGTC	Reverse primer to clone ZorE from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCATGAAATTATCTATCGACATTTCAG	Forward primer to clone ZorE from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
	CCCTGGAAGTACAGGTTTTCCAATTTTGCTGGCGTAAAG	Reverse primer to clone ZorE from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest
pGM288	GAAAACCTGTACTTCCAGGGTCAAT	Forward primer to clone ZorB $II_{115-235}$ from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	GGTGAATTCCTCCTGAATTTCATTACGAC	Reverse primer to clone ZorB $II_{115-235}$ from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCCTTGACGACTTCTTTCCTC	Forward primer to clone ZorB $II_{115-235}$ from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-

		term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest. Primers also used to amplify correspondent point mutations.
	CCCTGGAAGTACAGGTTTTCCTCCTGAATAA TCTTTC	Reverse primer to clone ZorB $II_{115-235}$ from *E. coli* ATCC8739 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest. Primers also used to amplify correspondent point mutations.
pGM287	GAAAACCTGTACTTCCAGGGTCAAT	Forward primer to clone ZorB $I_{165-287}$ from *S. marcescens* ATCC274 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	GGTGAATTCCTCCTGAATTTCATTACGAC	Reverse primer to clone ZorB $I_{165-287}$ from *S. marcescens* ATCC274 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to linearise vector
	AAATTCAGGAGGAATTCACCGTCGGGT GGGATAAAAAC	Forward primer to clone ZorB $I_{165-287}$ from *S. marcescens* ATCC274 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest. Primers also used to amplify correspondent point mutations.

	CCCTGGAAGTACAGGTTTTCTAGCGGCCTCT TCTTCAGGG	Reverse primer to clone ZorB $I_{165-287}$ from *S. marcescens* ATCC274 in pT12-derived plasmid in frame with a C-term Strep II tag by NEBuilder HiFi DNA Assembly. Primer is used to amplify genes of interest. Primers also used to amplify correspondent point mutations.
pGM196	AGAATTCACTGGCCGTCGTTTTAC	Forward primer to clone Zorya II with its own promoter from *E. coli* ATCC8739 in pSUPROM by NEBuilder HiFi DNA Assembly. Primer binds to the vector and are designed to remove the Tat promoter to insert Zorya II with its own promoter and terminator
	TCTAGAGTCGACCCCTCG	Reverse primer to clone Zorya II with its own promoter from *E. coli* ATCC8739 in pSUPROM by NEBuilder HiFi DNA Assembly. Primer binds to the vector and are designed to remove the Tat promoter to insert Zorya II with its own
	AACGACGGCCAGTGAATTCTCCTGCCT TCCTTTGATAC	Forward primer to clone Zorya II with its own promoter from *E. coli* ATCC8739 in pSUPROM by NEBuilder HiFi DNA Assembly. Primer binds to insert.
	CTCGAGGGGTCGACTCTAGATTACAATTTTG CTGGCGTAAAG	Reverse primer to clone Zorya II with its own promoter from *E. coli* ATCC8739 in pSUPROM by

		NEBuilder HiFi DNA Assembly. Primer binds to insert.
pGM336	TCTAGAGTCGACCCCTCG	Forward primer to delete Zorya II from pSUPROM by KLD leaving Zorya II specific promoter in the to replace Tat promoter.
	TTTGATACCTGTGTAAATAATGG	Reverse primer to delete Zorya II from pSUPROM by KLD leaving ZoryaII specific promoter in the to replace Tat promoter.
pGM337	GATCGATTACCCTCGATG	Forward primer to delete ZorA from pGM196 by KLD.
	GATTATTCAGGAGTAAGAG	Reverse primer to delete ZorA from pGM196 by KLD.
pGM338	ATGGATAAGATTATAGGGAAAC	Forward primer to delete ZorB from pGM196 by KLD.
	GATCGATTACCCTCGATG	Reverse primer to delete ZorB from pGM196 by KLD.
pGM339	ATGGATAAGATTATAGGGAAAC	Forward primer to delete ZorAB from pGM196 by KLD.
	TTTGATACCTGTGTAAATAATGG	Reverse primer to delete ZorAB from pGM196 by KLD.
pGM340	GATTATTCAGGAGTAAGAG	Forward primer to delete ZorEfrom pGM196 by KLD.
	TCTAGAGTCGACCCCTCG	Reverse primer to delete ZorE from pGM196 by KLD.
pGM341	TCTAGAGTCGACCCCTCG	Forward primer to clone the coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pGM336, under the control of Zorya II native promoter NEBuilder HiFi

		DNA Assembly. Primer linearises vector.
	TTTGATACCTGTGTAAATAATGG	Reverse primer to clone the coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pGM336, under the control of Zorya II native promoter NEBuilder HiFi DNA Assembly. Primer linearises vector.
	CATTATTTACACAGGTATCAAA ATGTTAGCGCAGCTTTTTGAG	Forward primer to clone the coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pGM336, under the control of Zorya II native promoter NEBuilder HiFi DNA Assembly. Primer linearises vector. Insert amplified from pGM41.
	GGGTCGACTCTAGAGGATCC GTGATGGTGATGGTGATGCAATTTTG	Reverse primer to clone the coding sequence of ZorA, followed by ZorB fused to a TEV site and 2xStrepII tag and ZorE fused to a His6x tag in pGM336, under the control of Zorya II native promoter NEBuilder HiFi DNA Assembly. Primer linearises vector. Insert amplified from pGM41
pGM342	TCTAGAGTCGACCCCTCG	Forward primer to clone the coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it

	TTTGATACCTGTGTAAATAATGG	Reverse primer to clone the coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it
	CATTATTTACACAGGTATCAAA ATGGATAAGATTATAGGGAAAC	Forward primer to clone the coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM289
	GGGTCGACTCTAGAGGATCC GTGATGGTGATGGTGATGCAATTTTG	Reverse primer to clone the coding sequence ZorB fused to a TEV site and 2xStrepII tag followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM289
pGM343	TCTAGAGTCGACCCCTCG	Forward primer to clone the coding sequence of ZorA followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it
	TTTGATACCTGTGTAAATAATGG	Reverse primer to clone the coding sequence of ZorA followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it
	CATTATTTACACAGGTATCAAA ATGTTAGCGCAGCTTTTTGAG	Forward primer to clone the coding sequence of ZorA followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM290

	GGGTCGACTCTAGAGGATCC GTGATGGTGATGGTGATGCAATTTTG	Reverse primer to clone the coding sequence of ZorA followed by ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM290
pGM344	TCTAGAGTCGACCCCTCG	Forward primer to clone the coding sequence of ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it
	TTTGATACCTGTGTAAATAATGG	Reverse primer to clone the coding sequence of ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Primer binds to vector to linearise it
	CATTATTTACACAGGTATCAAA ATGAAATTATCTATCGAC	Forward primer to clone the coding sequence of ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM291
	GGGTCGACTCTAGAGGATCC GTGATGGTGATGGTGATGCAATTTTG	Reverse primer to clone the coding sequence of ZorE fused to a His6x tag in pGM336 by NEBuilder HiFi DNA Assembly. Insert amplified from pGM291.
