Retraction

The authors would like to retract their article “Effects of a pre-visit educational website on information recall and needs fulfilment in breast cancer genetic counselling, a randomized controlled trial” [1]. After publication of this paper the co-authors noticed a discrepancy between the analyses as described (intention-to-treat analysis) and the analyses as performed (per-protocol analysis), leading to an overestimation of the intervention effects. Therefore the authors have decided to retract this paper in its current form.
