

Supplement Content

Supplementary Figure 1. Directed acyclic graph (DAG) illustrating confounder selection.

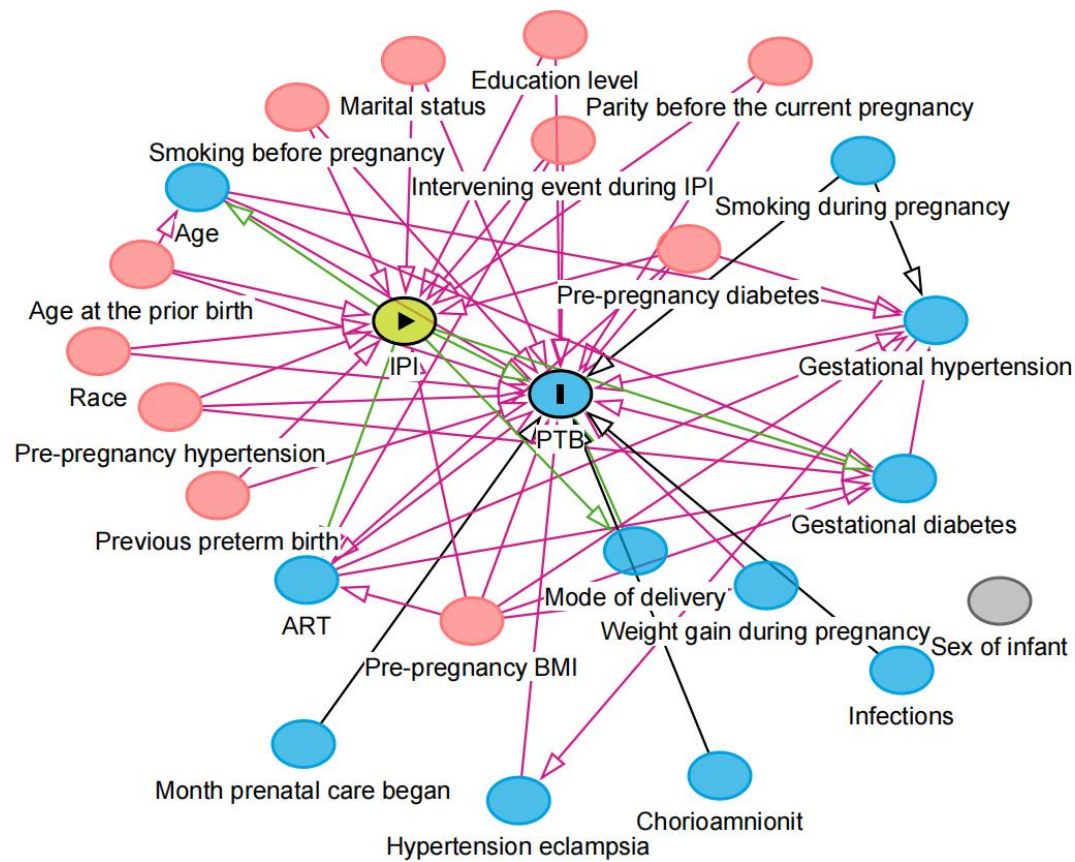

Supplementary Figure 2. Subgroup analyses between interpregnancy interval and preterm birth by age at the prior birth.

Supplementary Figure 3. Subgroup analyses between interpregnancy interval and preterm birth by pre-pregnancy BMI.

Supplementary Figure 4. Subgroup analyses between interpregnancy interval and preterm birth by parity before the
current pregnancy.

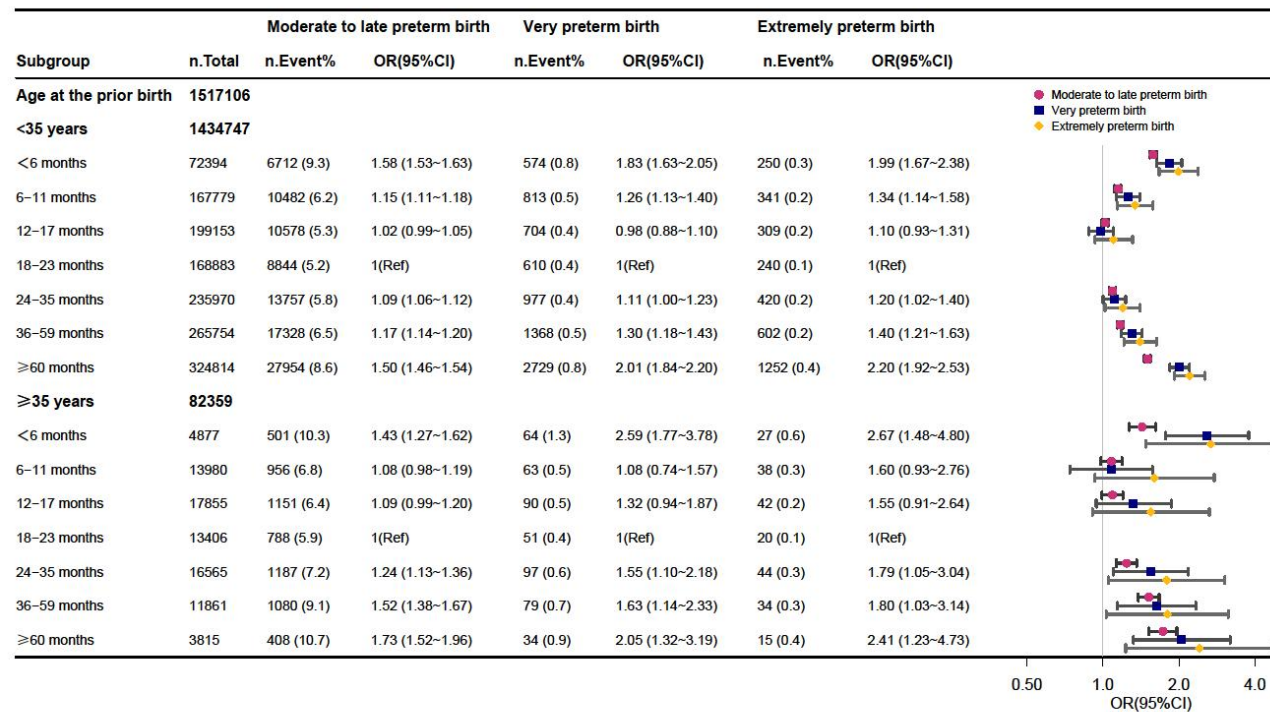

Supplementary Figure 5. Subgroup analyses between interpregnancy interval and preterm birth by mode of delivery.

Supplementary Figure 6. Non-linear association between interpregnancy interval and preterm birth based on
without potential confounders or missing data.

Supplementary Figure 1. Directed acyclic graph (DAG) illustrating confounders selection.

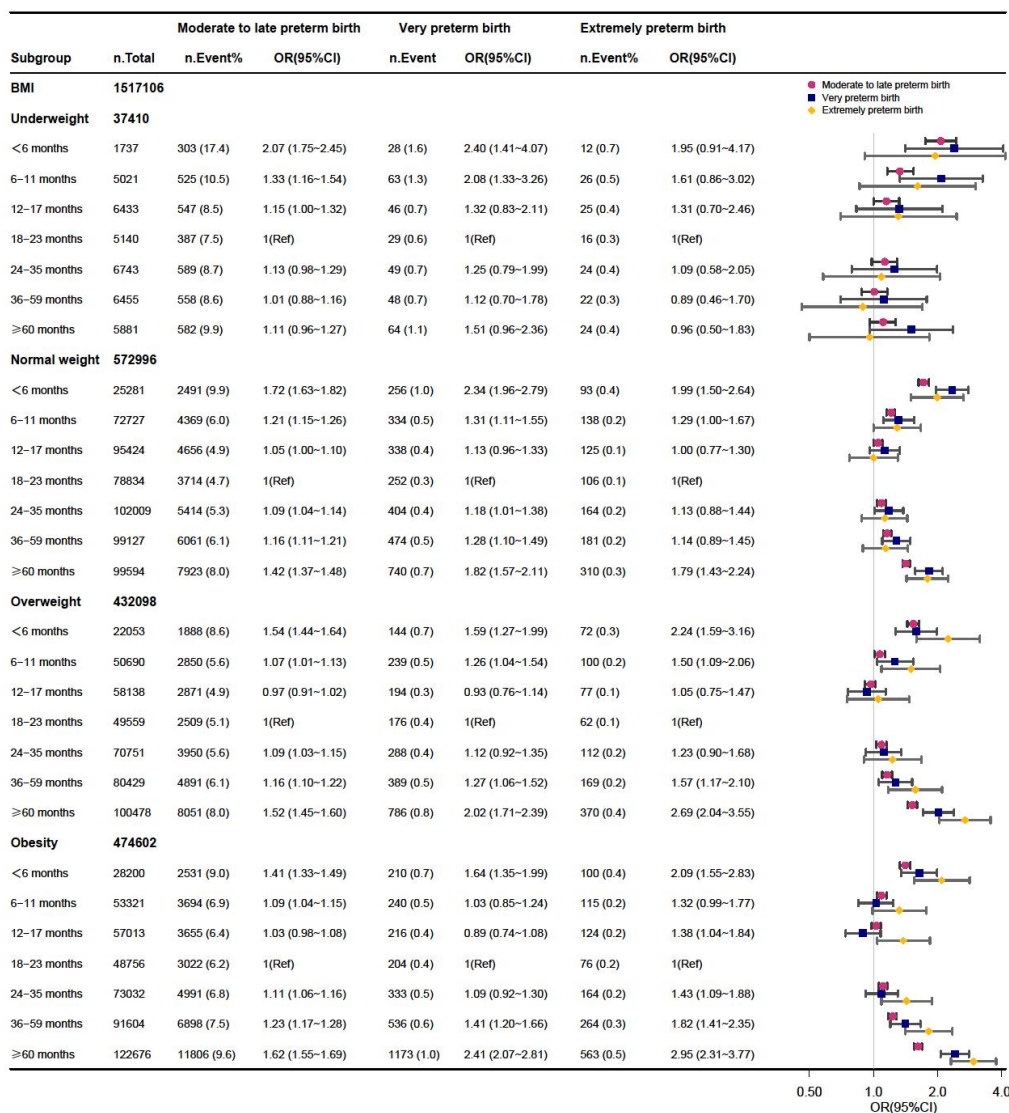

Abbreviations: IPI, interpregnancy interval; BMI, body mass index; ART, assisted reproductive technology.

Supplementary Figure 2. Subgroup analyses between interpregnancy interval and preterm birth by age at the prior birth.

Abbreviations: CI, confidence interval; OR, odds ratio; Ref, reference; BMI, body mass index.

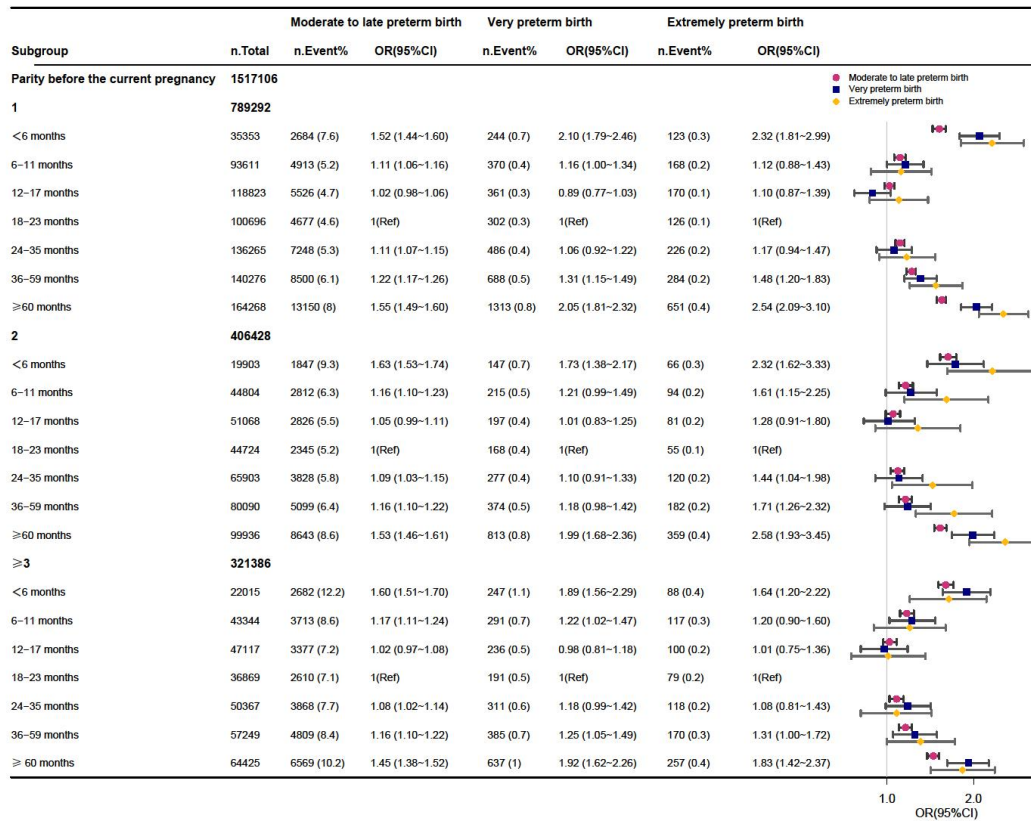

Adjusted for race, marital status, education level, intervening event during IPI, parity before the current pregnancy, pre-pregnancy BMI, smoking before pregnancy, pre-pregnancy diabetes, pre-pregnancy hypertension, and previous history of preterm birth.

Supplementary Figure 3. Subgroup analyses between interpregnancy interval and preterm birth by pre-pregnancy BMI.

Abbreviations: CI, confidence interval; OR, odds ratio; Ref, reference; BMI, body mass index.

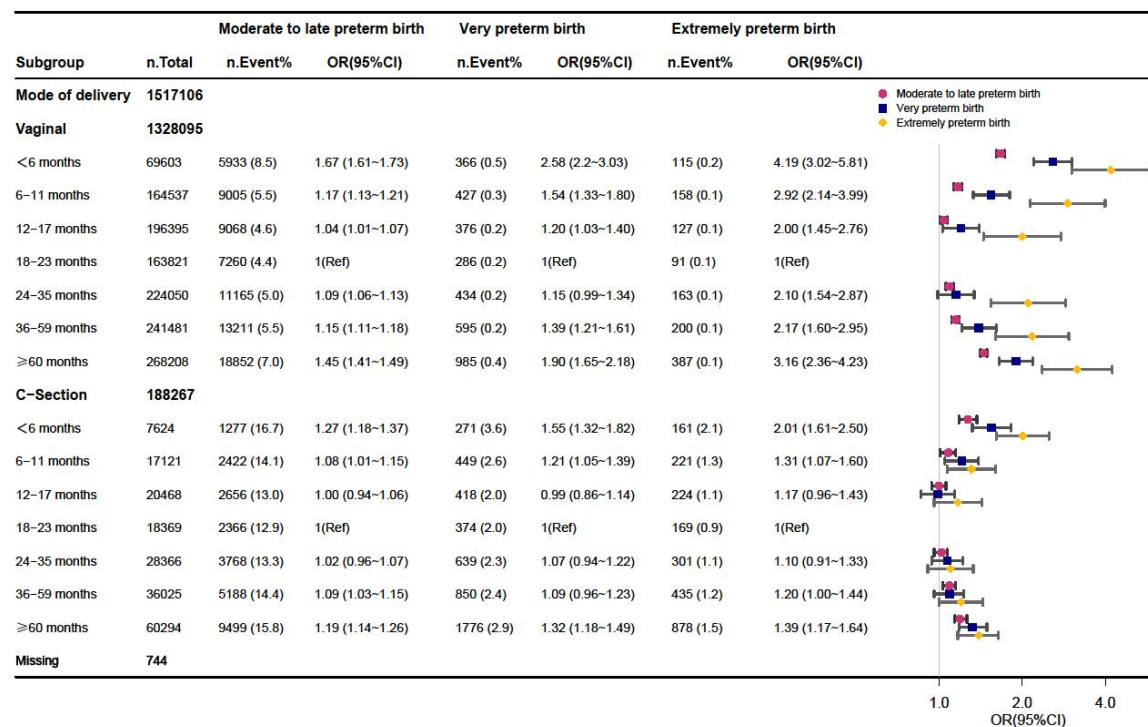

Adjusted for age at the prior birth, race, marital status, education level, intervening event during IPI, parity before the current pregnancy, smoking before pregnancy, pre-pregnancy diabetes, pre-pregnancy hypertension, and previous history of preterm birth.

Supplementary Figure 4. Subgroup analyses between interpregnancy interval and preterm birth by parity before the current pregnancy.

Abbreviations: CI, confidence interval; OR, odds ratio; Ref, reference; BMI, body mass index.

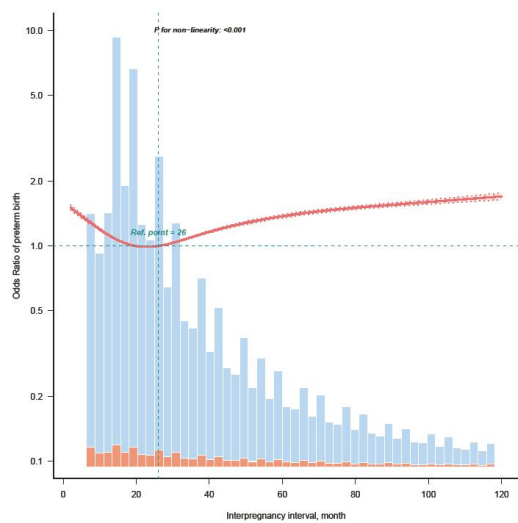

Adjusted for age at the prior birth, race, marital status, education level, intervening event during IPI, pre-pregnancy BMI, smoking before pregnancy, pre-pregnancy diabetes, pre-pregnancy hypertension, and previous history of preterm birth.

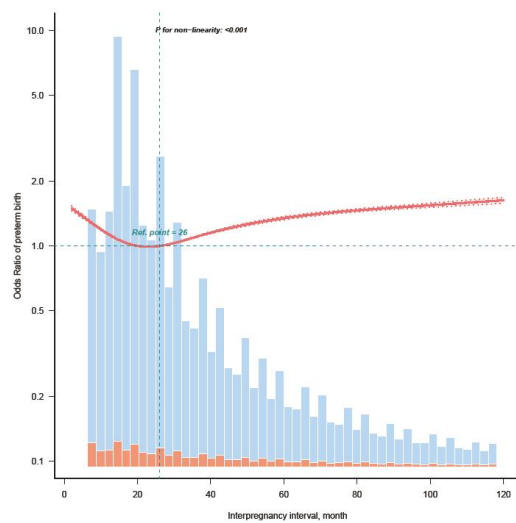

Supplementary Figure 5. Subgroup analyses between interpregnancy interval and preterm birth by mode of delivery.

Abbreviations: CI, confidence interval; OR, odds ratio; Ref, reference; BMI, body mass index.

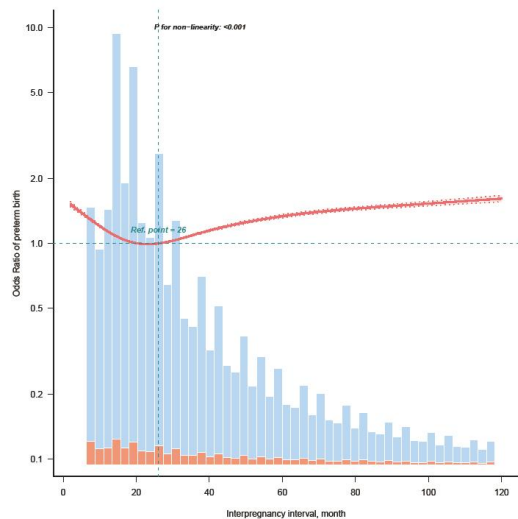

Adjusted for age at the prior birth, race, marital status, education level, intervening event during IPI, parity before the current pregnancy, pre-pregnancy BMI, smoking before pregnancy, pre-pregnancy diabetes, pre-pregnancy hypertension, and previous history of preterm birth.

Supplementary Figure 6. Non-linear association between interpregnancy interval and preterm birth based on without potential confounders or missing data.

A: Without previous preterm birth (n=1364011)

B: Without pre-pregnancy diabetes (n=1426096)

C: Without pre-pregnancy hypertension (n=1403565)

D: Without intervening event during IPI (n=1262150)

E: Without previous preterm birth, pre-pregnancy diabetes, pre-pregnancy hypertension, and intervening event during IPI (n=1164858)

F: Without SGA or LGA (n=1155456)

G: Without missing covariates (n=1126842)

Abbreviations: CI, confidence interval; OR, odds ratio; Ref, reference; IPI, interpregnancy interval; BMI, body mass index; SGA, small for gestational age; LGA, large for gestational age.

Age at the prior birth, race, marital status, education level, intervening event during IPI, parity before the current pregnancy, pre-pregnancy BMI, smoking before pregnancy, pre-pregnancy diabetes, pre-pregnancy hypertension, and previous history of preterm birth were adjusted for in the model except when the variable was excluded.

Solid and dashed lines indicate the predicted value and 95% CI. Only data for the IPI in the range of 1-120 months are shown.
