

The June Issue of the CGJ

DOI: <http://dx.doi.org/10.5770/cgj.19.241>

Our June issue presents a wide variety of research in numerous Canadian settings, including acute care, long-term care, and community dwelling older adults. Dr. Salina Juma *et al.*⁽¹⁾ has examined the use of a clinical frailty scale to predict length of stay in acute care. Dr. Randall Sargent *et al.*⁽²⁾ has examined the use of a warfarin protocol in long-term care. The clinical implications of the new criteria for Alzheimer's disease are succinctly examined in an article by Drs. Pierre Molin and Kenneth Rockwood.⁽³⁾ The use of a core competency based program in residency education is explored by Dr. Lesley Charles *et al.*⁽⁴⁾ The use of art appreciation to help alleviate behavioural issues in community dwelling older adults is examined by Dr. Afeez Hazzan *et al.*⁽⁵⁾

Enjoy!

Dr. Kenneth Madden
Editor-in-Chief
Canadian Geriatrics Journal
