The paper “Nonsyndromic Mandibular Symphysis Cleft” by Leela Krishna Guttikonda et al. was interesting. However, we would like to point out a factual error in the discussion in this paper. In the seventh paragraph of discussion the authors have attributed one theory for the formation of this cleft to Rana et al. for an article published in *Indian Journal of Plastic Surgery* in 2004. This is factually incorrect.

In that article the authors Rana et al. [1] have referred to an article by Oostrom et al. [2] in *Plastic and Reconstructive Surgery* in 1996 in which this hypothesis was propounded by the authors.

We feel that such errors should be avoided and due credit should be given to the first authors, namely, Oostrom et al.

Conflict of Interests

The authors declare that there is no conflict of interests regarding the publication of this paper.
