

Ultrasound quantitative characterization of tendinopathy with shear wave elastography in an ex vivo porcine tendon model **ELECTRONIC SUPPLEMENTARY MATERIAL**

Supplemental Table 1. Results of ANOVA models for average SWS and tendon force to rupture.

Average Shear wave speed	
	p-value
Injection Type	< 0.001
Incubation Time	0.001
Cut Depth	0.001
Injection:Incubation Time	0.017
Force to rupture	
	p-value
Injection Type	< 0.001
Incubation Time	< 0.001
Cut Depth	< 0.001
Injection:Incubation Time	< 0.001
Injection:Cut Depth	< 0.001
