Edited by W. T. A. Harrison, University of Aberdeen, Scotland

The title compound, $C_{12}H_9N_3O_2$, was obtained as a cyclized oxadiazole derivative from substituted thiosemicarbazide in the presence of manganese(II) acetate. The furan ring is disordered over two orientations, with occupancies of 0.76 (2) and 0.24 (2). The dihedral angles between the central oxadiazole ring and the pendant phenyl ring and furan ring (major disorder component) are 3.34 (18) and 5.7 (6) $^\circ$, respectively. A short intramolecular C—H···O contact generates an *S*(6) ring. In the crystal, inversion dimers linked by pairs of N—H···N hydrogen bonds generate $R_2^2[8]$ loops. The dimers are linked by C—H··· π and π — π interactions [range of centroid–centroid distances = 3.291 (2)–3.460 (8) Å], generating a three-dimensional network.

Keywords: crystal structure; cyclized oxadiazole derivative; hydrogen bonding; C—H··· π interactions; π — π interactions.

Crystal structure of 5-(furan-2-yl)-N-phenyl-1,3,4-oxadiazol-2-amine

Santosh Paswan, Manoj K. Bharty, Sanyucta Kumari, Sushil K. Gupta and Nand K. Singh

S1. Comment

1,3,4-Oxadiazole-2-thiones, an important class of heterocyclic ligands in the field of coordination chemistry (Tarfader *et al.*, 2001; Ali & Ali, 2007; Singh *et al.*, 2007; Zhao *et al.*, 2007; Zhang *et al.*, 2007; Amin *et al.*, 2004) have wide applications both in medicine and agriculture (Pachhamia & Parikh, 1988; Xu *et al.*, 2002). The cyclization of 3-acyl-dithiocarbazate esters, N-aryldithiocarbazates and their salts to the corresponding 1,3,4-oxadiazole in the presence of base is reported in the literature (Foks *et al.*, 2002). Further, 5-benzyl-N-phenyl-1,3,4-thiadiazole-2-amine and 2-(5-phenyl-1,3,4-thiadiazol-2-yl)pyridine have also been reported in the presence of manganese(II) nitrate *via* loss of H₂O (Dani *et al.*, 2013). It is known that in the presence of strong acid, N-acylhydrazine carbodithioate is converted into thiadiazole but in presence of weak acid or base they are cyclized into oxadiazole. In the present case, manganese(II) acetate behaves like a weak acid and thus converts thiosemicarbazide into oxadiazole *via* loss of H₂S.

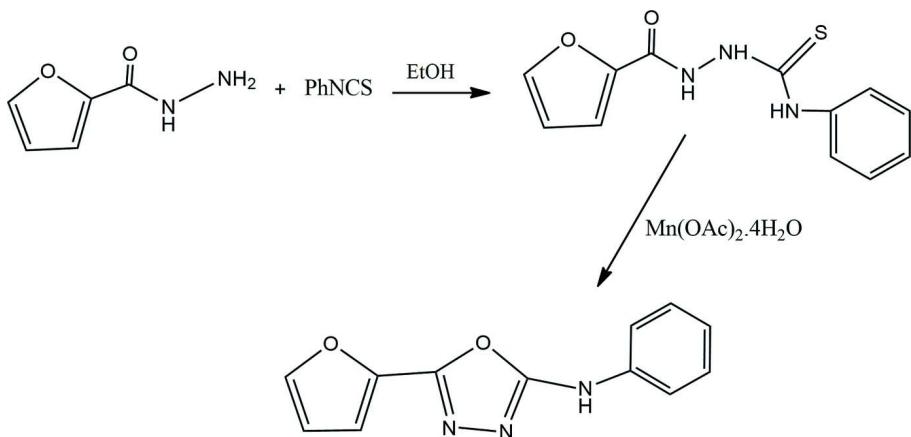

In the title compound (Fig. 2), the mean plane of the central oxadiazole ring (O2/C5/N1/N2/C6) forms dihedral angles of 5.65 and 3.34° with the furan (O1/C1–C4) and phenyl rings (C7–C12), respectively. Both the furan and phenyl rings are twisted by an angle of 7.51°. The C–N bond lengths, N1–C5 1.290 (4) and N2–C6 1.302 (4) Å, are similar to standard C=N 1.28 Å. The distances found within the oxadiazole ring are intermediate between single and double bond, suggesting considerable delocalization in the ring. In the crystal, pairs of intermolecular N—H···N hydrogen bonds between the oxadiazole ring and the amine group forming dimers with an R₂²[8] ring motif (Fig. 3, Table 1) and an intramolecular C—H···O interaction is also found. Molecules are further linked by weak C—H···N and two C—H···π interactions, involving (C7–C12) and (O1/C1–C4) rings. In addition, weak π···π intermolecular stacking interactions [Cg1···Cg2 (x, 1+y, z) = 3.460 (8) Å; Cg2···Cg2 (1-x, 1-y, 1-z) = 3.291 (2) Å; Cg2···Cg3 (x, -1+y, z) = 3.431 (4) Å; Cg1: O1/C1–C4; Cg2: O2/C5/N1/N2/C6; Cg3: O1A/C1A–C4A] are present and influences the crystal packing. The furan ring is disordered over two positions, with occupancies of 0.76 (2) and 0.24 (2).

S2. Experimental

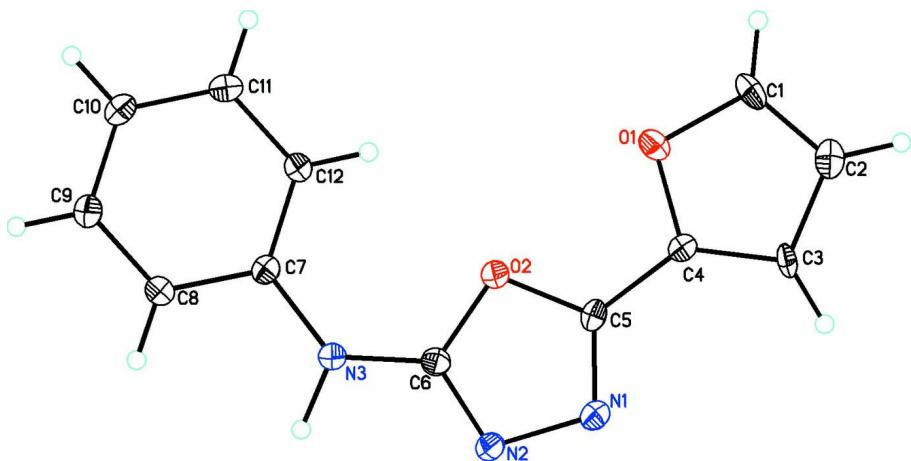

Referring to Fig. 1, a mixture of furan-2-carboxylic acid hydrazide (1.260 g, 10 mmol) and phenyl isothiocyanate (1.2 mL, 10 mmol) in absolute ethanol (20 mL) was refluxed for 4 h. The solid *N*-(furan-2-carbonyl)-4-phenylthiosemicarbazide obtained upon cooling was filtered off and washed with water and ether (50:50 v/v). A mixture of methanolic solution of *N*-(furan-2-carbonyl)-4-phenylthiosemicarbazide (0.261 g, 1.00 mmol) and Mn(OAc)₂·4H₂O (0.246 g, 1 mmol) was stirred for 4 h. A clear yellow solution obtained was filtered off and kept for crystallization. Colourless needles were obtained after 10 days. Yield: 60%; m.p.: 476–478 K. Anal. Calc. for C₁₂H₉N₃O₂(%): C 63.43, H 3.99, N 18.49. Found: C 63.68, H 4.05, N 18.61. ¹H NMR (DMSO-d₆): δ [ppm] = 11.60 (s, 1H, NH), 8.80–7.31 (m, 3H, furan), 7.80–6.76 (m, 5H, Phenyl). ¹³C NMR (DMSO-d₆): δ [ppm] = 161.3 (C6), 162.0 (C5), 153.7 (C4), 146.9 (C1), 144.8 (C3), 140.7 (C2) (furan C); 120.6–145.2 (phenyl C) (Fig. 2). IR (selected, KBr): 3210 [ν(N–H)], 1605 [ν(C≡N)], 1076 [ν(N–N)] cm⁻¹.

S3. Refinement

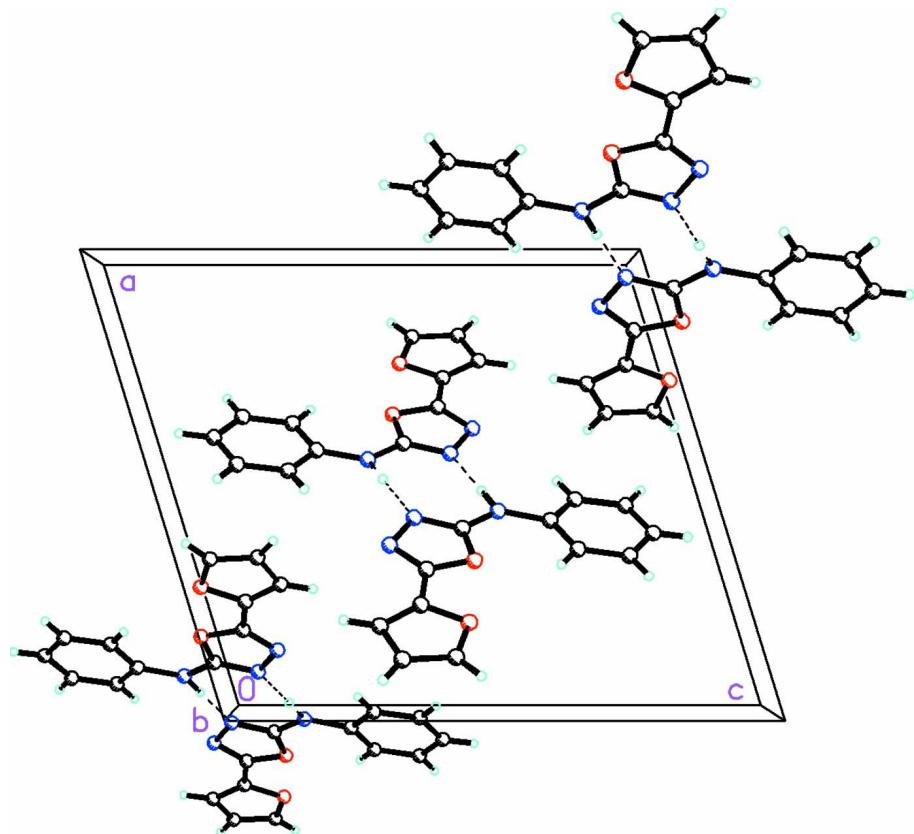

The H atom bonded to N3 was located in a difference Fourier map and refined freely; N3—H3N3 = 1.02 (3) Å. Other H atoms were positioned geometrically and allowed to ride on their parent atoms, with C—H = 0.93 Å, and with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$. The ISOR restraint and EADP constraint commands in the *SHELXL2014* software were used for the disordered atoms.

 $\Delta\rho_{\min} = -0.21 \text{ e } \text{\AA}^{-3}$

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement on F^2 for ALL reflections except those flagged by the user for potential systematic errors. Weighted R -factors wR and all goodnesses of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The observed criterion of $F^2 > \sigma(F^2)$ is used only for calculating $-R$ -factor-obs etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.

Hydrogen-bond geometry (Å, °)

Cg1 and Cg4 are the centroids of the O1A/C1/C2/C3/C4 and C7—C12 five- and six-membered rings, respectively.
