# International Journal of Surgery Case Reports

journal homepage: [www.casereports.com](http://www.casereports.com)

## Preface

The idea of collecting surgical case reports from Italian young surgeons in a dedicated supplement arises from the awareness that the most difficult and interesting clinical cases represent the starting point for a critical and in-depth clinical observation and for a better scientific knowledge through the study of literature. This supplemental issue on Case reports from Italian young surgeons in International Journal of Surgery Case Reports therefore includes both rare clinical conditions that may be misunderstood or require a treatment in an emergency setting in which it is not always possible to carry out a careful preoperative examination with related difficulties both for young and experienced surgeons and reports of surgeries described for the first time in the literature with the hope that their knowledge will invite other surgeons to reproduce these procedures and to promote their diffusion. Finally, from the whole Supplement it emerges that, in most cases, the use of new technologies, laparoscopy, robotic surgery and combined interventional techniques, represents the added value to solve the most complex conditions.

A special thanks to the Editor in Chief and to the Editorial Board of International Journal of Surgery Case Reports who, from the beginning, believed in the value of this project and to the Department of Surgical, Oncological and Oral Sciences (Di.Chir.On.S.) of the University of Palermo that sponsored the Supplement to further underline the didactic role and the scientific significance of this work.

### Declaration of Competing Interest

The authors have no conflicts of interest to declare.

### Acknowledgement

This article is part of a supplement entitled Case reports from Italian young surgeons, published with support from the Department of Surgical, Oncological and Oral Sciences - University of Palermo.
