# Erratum: The combination of the functionalities of feedback circuits is determinant for the attractors' number and size in pathway-like Boolean networks 

Eugenio Azpeitia, Stalin Muñoz, Daniel González-Tokman, Mariana Esther MartínezSánchez, Nathan Weinstein, Aurélien Naldi, Elena R. Álvarez-Buylla, David A. Rosenblueth \& Luis Mendoza

Scientific Reports 7:42023; doi: 10.1038/srep42023; published online 10 February 2017; updated on 22 March 2017
This Article contains typographical errors.
In the methods section under subheading 'Boolean networks', "In Boolean networks, variables can only take one of two possible values, 0 or 1 , and their dynamics is described by

$$
\begin{equation*}
x_{i}(t+1)=f_{1}\left(x_{1}(t), \ldots x_{n}(t)\right) \tag{1}
\end{equation*}
$$

where $x_{i}(t+1)$ represents the value of variable i at the time $t+1$ as a Boolean function $F_{i}$ of its n regulators $x_{i}(t)$, $\ldots, x_{n}(t)$ at the current time".
should read:
"In Boolean networks, variables can only take one of two possible values, 0 or 1, and their dynamics is described by

$$
\begin{equation*}
x_{i}(t+1)=f_{1}\left(x_{1}(t), \ldots x_{n}(t)\right) \tag{1}
\end{equation*}
$$

where $x_{i}(t+1)$ represents the value of variable i at the time $t+1$ as a Boolean function $f_{i}$ of its n regulators $x_{i}(t)$, $\ldots, x_{n}(t)$ at the current time".

In the Results section under subheading 'Non-hierarchical and non-unidirectional interactions greatly increases the dynamical diversity of pathways',
"Because the inputs follow the identity function, the minimum number of attractors is equal to $2 \mid$ inputsl|, where inputs is the set of inputs".
should read:
"Because the inputs follow the identity function, the minimum number of attractors is equal to $2^{\mid \text {inputs } \mid}$ where inputs is the set of inputs".
