

SSC

**Supplementary Figure1: Flow cytometry analysis of 5E17 reactivity to GBM cells**

Flow cytometric analyses of 5E17 reactivity in GBM cell lines (U87MG, T98G and U251) and patient-derived tumor cell lines (others). The result of staining with the isotype instead of anti-5E17 monoclonal antibody were used to draw the gate for 5E17-positive cells. Blue histogram indicates isotype control. SSC, side scatter.
