

Supplementary Material to: “Epitope-based antibody development against metalloproteinases and phospholipases A₂ from *Deinagkistrodon acutus* venom”

Additional file 1. Antigenic epitopes of (A) metalloproteinase and (B) phospholipase A₂ from *Deinagkistrodon acutus* venom predicted by IEDB-Bepipred 2.0 online server, with a threshold of 0.5. The yellow sections represent the predicted antigenic epitope regions.
