

CORRECTION

Correction: Paracoccidioides brasiliensis 30 kDa Adhesin: Identification as a 14-3-3 Protein, Cloning and Subcellular Localization in Infection Models

Julhiany de Fatima da Silva, Haroldo César de Oliveira, Caroline Maria Marcos, Rosângela Aparecida Moraes da Silva, Tania Alves da Costa, Vera Lucia García Calich, Ana Marisa Fusco Almeida, Maria José Soares Mendes-Giannini

In [Fig 3](#), panel 6 is a mistaken duplication of panel 4. The authors have provided a corrected version of [Fig 3](#) here that includes a new image for panel 6. The original blots used to create the revised panel and figure as well as original blots for both the cytoplasmic fraction and the cell free extract can be viewed in [S1 Data](#). The authors confirm that this error does not alter their results.

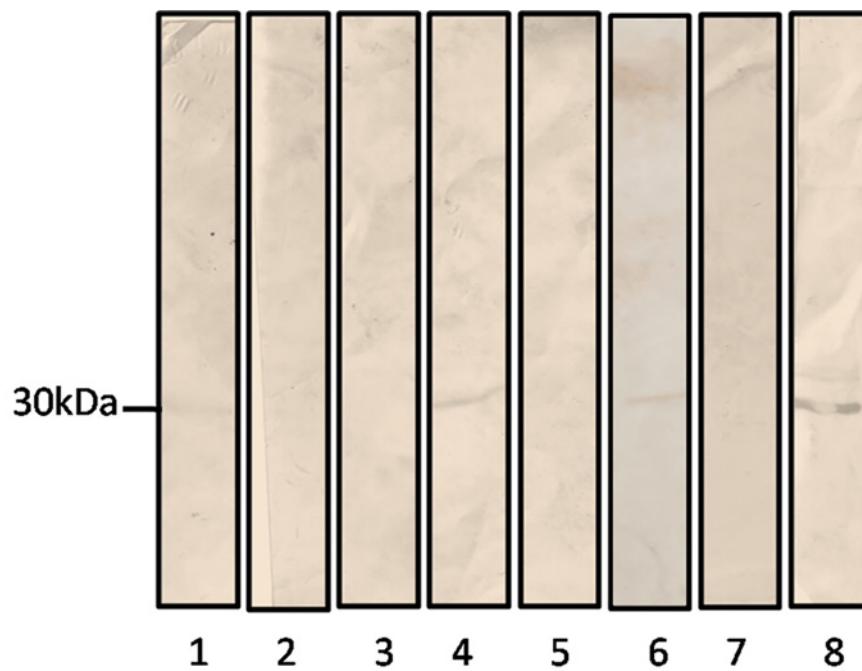

Fig 3. Immunoblotting was performed using the anti-Pb14-3-3 polyclonal antibody to verify 14-3-3 protein reactivity. Cytoplasmic fraction from *P. brasiliensis* grown in Fava Nettós media (1), cell wall fraction from *P. brasiliensis* grown in Fava Nettós media (2), and A549 cells infected with *P. brasiliensis* for 2 h (4), 5 h (6) and 8 h (8). The control was performed using noninfected A549 cells for 2 h (3), 5 h (5), and 8 h (7).
