
New nucleotide sequence data on the EMBL File Server

August 7, 1989 to August 21, 1989

New nucleotide sequence data, available from the EMBL File Server¹, are reported below. Availability of all the newest sequence data is the result of collaboration between the EMBL Data Library and GenBank[®], and data are supplied regularly by both groups. Updates to existing data are not reported here. In addition to the newest data, old data which was previously missed will appear as it is discovered. This report has been prepared by the EMBL Data Library, and is itself available on the file server with the filename NUC:21-8-1989.NAR
