Correction to: Effect of vibration characteristics and vibrator arrangement on the tactile perception of the upper arm in healthy subjects and upper limb amputees

Matthieu Guemann^{1*}, Sandra Bouvier², Christophe Halgand¹, Florent Paquet¹, Leo Borrini³, Damien Ricard⁴, Eric Lapeyre³, Daniel Cattaert¹ and Aymar de Ruyg^{1,5}

Correction to: *J Neuroeng Rehabil*

<https://doi.org/10.1186/s12984-019-0597-6>

The original article [1] contained an error whereby the captions to Fig. 3 and Fig. 8 were mistakenly interchanged. This has now been corrected.

Furthermore, this error was mistakenly carried forward by the production department which handled this article, and thus was not the fault of the authors.

Fig. 3 Example of one patient with vibrors encapsulated in a plastic piece and attached to an elastic band by surgical file

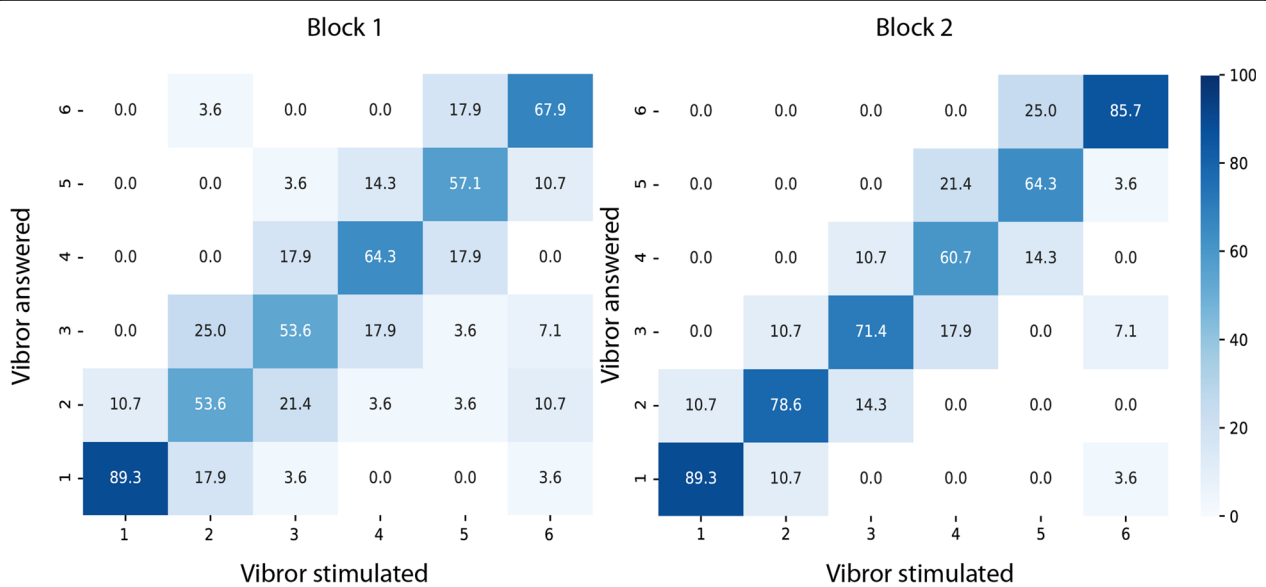

Fig. 8 Confusion matrix representation of correct answers for the 7 patients testing the CP arrangement in the spatial discrimination task. Patients underwent two sessions. For both matrices, X axis represents the stimulation sent as "order" and the Y axis the patient's answer. The gradient color corresponds to the recognition rate for each of these vibrors combinations. Darker color represents a higher recognition rate for the answered vibrator. Correct answers correspond to the diagonal, for which the answered vibrors corresponded to the stimulated ones. Errors occurred whenever the answered number differed from the stimulated one
