

# THE LANCET

## Public Health

### **Supplementary appendix**

This appendix formed part of the original submission and has been peer reviewed.  
We post it as supplied by the authors.

Supplement to: Floud S, Balkwill A, Sweetland S, et al. Cognitive and social activities and long-term dementia risk: the prospective UK Million Women Study. *Lancet Public Health* 2021; **6**: e116–23.

This blank page is inserted to rectify the appendix page numbering during the Lancet Public Health editorial process

# CONTENTS

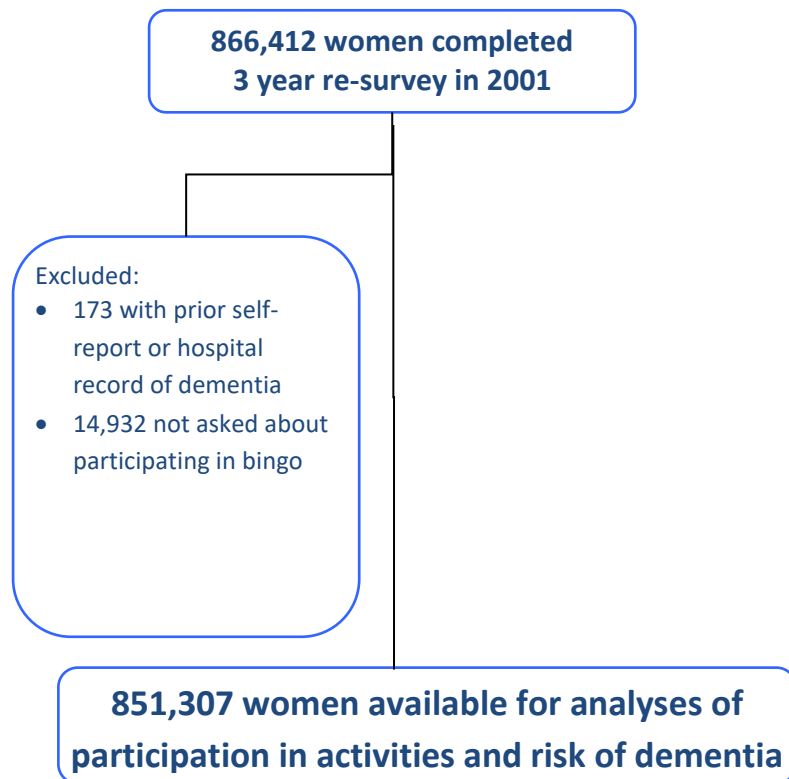

| Supplementary Figures and Tables  | Page       |
|---|------------|
| <b>eTable 1.</b> Agreement of reported participation in cognitive and social activities in two questionnaires completed 4 years apart (n=569,357)   | <b>3</b>   |
| <b>eFigure 1.</b> Flow chart of women included in the analyses of cognitive and social activities (out of 1.3 million recruited in median year 1998)  | <b>4</b>   |
| <b>eTable 2.</b> Characteristics at recruitment (in 1998) for women included in the analyses, by participation in certain cognitive and social activities, showing each category of covariate   | <b>5-6</b> |
| <b>eTable 3.</b> Characteristics at recruitment (in 1998) for women included in the analyses who were still alive after 10 years of follow-up and with no previous dementia detected, by participation in certain cognitive and social activities | <b>7</b>   |
| <b>eTable 4.</b> Dementia detection risk ratios during the second decade of follow-up after various activities were recorded, comparing non-participation vs participation in them: effect of adjustment by various factors                       | <b>8</b>   |
| <b>eTable 5.</b> Dementia detection risk ratios during the second decade of follow-up after various activities were recorded, comparing non-participation vs participation in them: effect of decade of age at recording                          | <b>9</b>   |
| <b>eFigure 2.</b> Million Women Study results for PHYSICAL inactivity: Dementia detection rate ratios, inactive vs active, during various time periods after recording PHYSICAL activity ( <i>Neurology</i> 2020; 94: e123–32)                    | <b>10</b>  |
