Key indicators: single-crystal X-ray study; $T = 153$ K; mean $\sigma(\text{C-C}) = 0.008$ Å;
 disorder in main residue; R factor = 0.040; wR factor = 0.095; data-to-parameter ratio = 22.3.

In the title compound, $[\text{Mo}_3(\text{CH}_3\text{COO})(\text{C}_4\text{H}_{10}\text{O}_2\text{PS}_2)_3\text{S}_4\text{-}(\text{C}_{10}\text{H}_8\text{N}_2)]\cdot\text{C}_4\text{H}_{10}\text{O}$, the complex molecule has a trinuclear incomplete cuboidal structure which is coordinated by three kinds of ligands, namely, diethyl dithiophosphate, acetate and 4,4'-bipyridyl. If Mo–Mo bonds are ignored, each Mo atom can be considered as six-coordinated in a distorted octahedral geometry. The Mo–Mo distance of 2.6880 (5) Å for two the Mo atoms bridged by the acetate ligand is shorter than the other two Mo–Mo distances [2.7490 (5) and 2.7566 (5) Å]. One ethyl group is disordered between two conformations in a 0.65 (3):0.35 (3) ratio. In the crystal, weak C–H···O interactions link the trinuclear molecules related by translation in [100] into chains. The crystal packing exhibits short intermolecular S···S contacts of 3.1886 (13) Å. In other words, in this crystal packing, a supramolecular structure is constructed by the C–H···O and S···S interactions.

1. Comment

Mo_3S_4 clusters with diethyl dithiophosphate (dtp) ligand have been previously reported (Tang *et al.*, 2001; Yao *et al.*, 1995). In this study, complex of $[Mo_3S_4(dtp)_4(CH_3CN)]$ (**1**) as starting material has been prepared by the reaction of $[Mo_3S_4(H_2O)_9]^{4+}$ with Hdtp obtained by dissolving P_4S_{10} in EtOH. Complex **1** reacts with acetate ion in pyridine, and then complex of $[Mo_3S_4(dtp)_3(\mu_2\text{-OAc})(\text{pyridine})]$ (**2**) was obtained. The pyridine in complex **2** loosely coordinates to the Mo_3S_4 core. Therefore, as estimating by VT- 1H NMR spectroscopy and mass spectrometry, the pyridine molecule liberates from $Mo_3S_4(dtp)_3(\mu_2\text{-OAc})$ core in solution (Hernandez-Molina *et al.*, 2011). In our material, the 4,4'-bipyridine ligand also easily liberates from $Mo_3S_4(dtp)_3(\mu_2\text{-OAc})$ core in solution as estimated by using mass spectrometry.

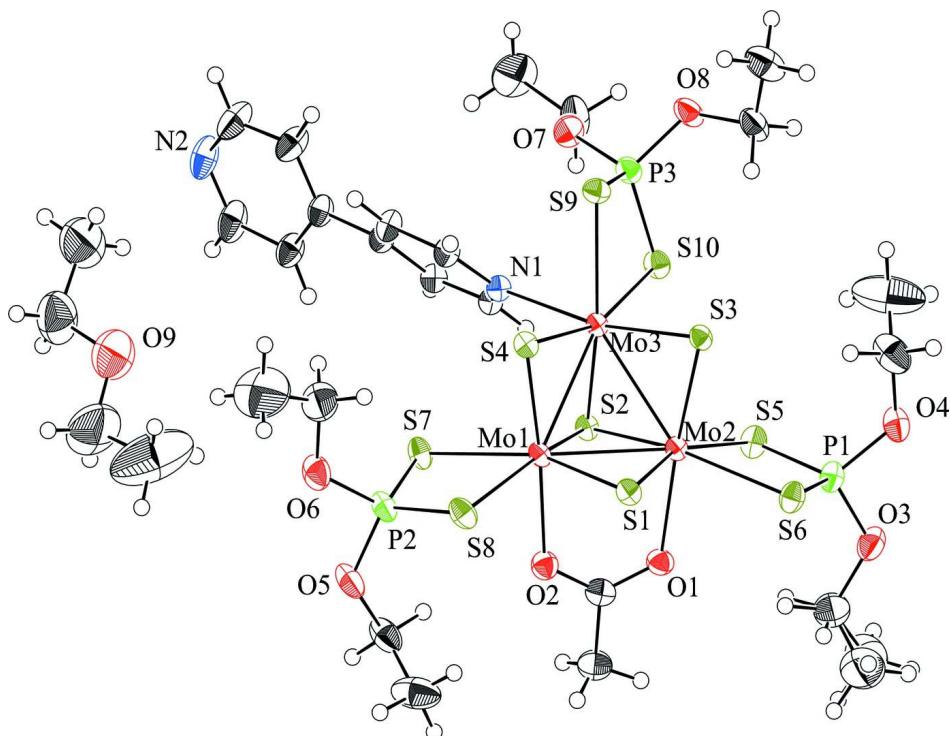

In general, the metal-metal distances of the sulfur bridged complexes increase with the increase of the negative charge of the cluster center (Ogino *et al.*, 1998; Tang *et al.*, 2001). In the title compound, the Mo3—N1 distance of 2.335 (5) Å is shorter than that in **2** [2.385 (9) Å], which has the same framework of $[Mo_3S_4(dtp)_3(\mu_2\text{-OAc})(L)]$ with the title compound. Furthermore, the average Mo—Mo distance in the title compound [2.731[1] Å] is also shorter than that in **2** [2.738[2] Å]. This shortening of Mo—Mo distance is probably caused by the electron donating ability of N donating atom of 4,4'-bipyridine ligand.

2. Experimental

The title compound was synthesized from $[Mo_3S_4(dtp)_4(CH_3CN)]$ (**1**) (dtp = diethyl dithiophosphate), which was prepared by the literature method (Yao *et al.*, 1995). To a solution of complex **1** (251 mg, 0.21 mmol) in 10 ml of EtOH was added excess 4,4'-bipyridine (415 mg, 2.65 mmol) and acetate anhydride (0.5 ml). After 4 h of stirring at 85°C, a brown powder was obtained (Yield: 176 mg, 70%). Red platelet single crystals of $[Mo_3S_4(dtp)_3(\mu_2\text{-OAc})(4,4'\text{-bpy})]$ suitable for X-ray analysis were obtained by vapor diffusion of the $CHCl_3$ solution with external Et_2O .

3. Refinement

All H atoms were geometrically positioned [C—H 0.95–0.99 Å] and refined as riding, with $U_{iso}(H) = 1.2\text{--}1.5 U_{eq}(C)$. The ethyl group attached to O3 was treated as disordered between two conformations with the occupancies refined to 0.65 (3) and 0.35 (3).

**Figure 1**

The molecular structure of the title compound with the atom-labeling scheme (except of C and H atoms). Displacement ellipsoids are drawn at the 50% probability level. Both components of the disordered ethyl group (attached to O3) are shown.

Refinement. Refinement was performed using all reflections. The weighted R -factor (wR) and goodness of fit (S) are based on F^2 . R -factor (gt) are based on F . The threshold expression of $F^2 > 2.0 \sigma(F^2)$ is used only for calculating R -factor (gt).
