**eTable 5. Association of germline *DICER1* variants and thyroid phenotypes stratified by pathogenicity.** Odds ratios and p-values for thyroid traits for individuals from pLOFs, pDeleterious, VUS, and LB compared to non-carriers are calculated using Fisher's exact test. The total number of individuals (N) who were carriers and non-carriers of each *DICER1* variant class is noted under the classification group column header. Non-carriers were matched by sex, ethnicity, and smoking-status.

**eFigure 2. Age of Diagnosis and Frequency of Diagnosis for Thyroid Conditions in Carriers and Non-Carriers (NC) of *DICER1* Variants.** The frequency of carriers and non-carriers for *DICER1* groups (left y-axis) with each thyroid clinical trait expressed as % cases/group were separated per two decades based on the first age of diagnosis in EHR. Heatmaps of age-at-diagnosis (x-axis) and frequency in different age ranges (right y-axis) are shown. Darker shade of blue indicates higher frequency. The numbers in brackets next to each variant classification group indicate “n cases” for carriers or matched non-carriers. The “X” symbol (panel D) means no observations. The total number of individuals in each group is shown in Figure 1. pLOF: predicted loss of function, VUS: variant of uncertain significance; LB: likely benign
