SUMMARY

To highlight the urgent need to save lives by implementing best practices in health care delivery, the slogan for 5 May 2021, world hand hygiene day, is “Seconds save lives – clean your hands”. The WHO campaign calls to action key stakeholders: health care workers, IPC practitioners, patients and families, facility managers, policy-makers, vaccinators, and the general public who can play critical roles in achieving optimal hand hygiene at the point of care, helping to strengthen society involvement.

The year 2020 was unprecedented in many ways, one of which was the tremendous attention given to appropriate hand hygiene practices in the fight against SARS-CoV-2. Hand hygiene has finally gained global recognition from policy-makers, health managers, health care workers and the general public as a keystone in infection prevention. The World Health Organization (WHO) placed increased focus on hand hygiene in the context of the global COVID-19 pandemic, in addition to its longstanding efforts through both the global

SAVE LIVES: Clean Your Hands campaign and the Water, Sanitation and Hygiene (WASH) Programme.

In the context of the pandemic WHO launched several initiatives, including the new WHO and UNICEF Hand Hygiene for All initiative (https://www.who.int/water_sanitation_health/sanitation-waste/sanitation/hand-hygiene-for-all/en/) to consistently improve hand hygiene practices as a whole-of-society approach to stop the spread of SARS-CoV-2 and sustain good practices beyond the pandemic. To achieve these goals, adequate infrastructures should be provided in health care and public settings, including for example schools and public transportations, and appropriate behaviour to clean hands when needed should be taken by all key players.

This year, WHO's *SAVE LIVES: Clean Your Hands* campaign focuses on achieving appropriate hand hygiene action at the point of care. This has been at the core of WHO patient safety strategies during health care delivery for many years, but is now more critical than ever. Furthermore, 2021 has been designated the International Year of Health and Care Workers (<https://www.who.int/campaigns/annual-theme/year-of-health-and-care-workers-2021>): focusing on their protection is also paramount.

The first prerequisite for effective implementation of hand hygiene action at the point of care is "system change" meaning that the appropriate infrastructure and supplies should be available at the point of care so that health

Table 1
5 May 2021 WHO SAVE LIVES: Clean Your Hands campaign calls to action

Campaign participants	Call to action
Health care workers	“Now more than ever, clean your hands at the point of care*”
IPC** practitioners	“Champion and mentor clean hands at the point of care”
Facility managers	“Ensure hand hygiene supplies are available at every point of care”
Policy-makers	“Invest now to ensure hand hygiene for all”
Patients and families	“Help us to help you: please clean your hands”
Vaccinators	“Clean your hands with every vaccine”
General public	“Make clean hands your habit – it protects us all”

* Point of care refers to the place where three elements come together: the patient, the health care worker, and care or treatment involving contact with the patient or their surroundings (as published in the WHO guidelines on hand hygiene in health care).

** IPC: infection prevention and control.

workers can clean their hands promptly when needed. This requires reliable and uninterrupted provision of good-quality alcohol-based handrub (ABHR), supplies of clean water, soap, single-use towels and an adequate number of functioning sinks. Although effective infection prevention and control (IPC) programmes in health care facilities should meet WHO minimum requirements [1], the 2020 global WASH report revealed that one in three facilities do not have adequate hand hygiene stations at the point of care [2]. A recent systematic review showed that hand hygiene compliance is only around 9% during care of critically ill patients in low-income countries [3]; such shocking data, in conjunction with the ongoing COVID-19 pandemic, highlight the urgent need for additional efforts to strengthen global compliance and champion best practices. Although vaccines are starting to be delivered, hand hygiene and appropriate use of personal protective equipment remain crucial for safe care of both COVID-19 and non-COVID-19 patients.

Effective hand hygiene not only reduces the burden of health care-associated infections and the spread of antimicrobial resistance but is also a key IPC measure for safe COVID-19 vaccination [4]. ABHR is the preferred method for hand hygiene in health care as it can be easily accessible at the point of care, kills microorganisms quickly (within 20–30 seconds) and is well tolerated by the skin. These advantages can help to overcome behavioural barriers to compliance. In the light of current shortages, many countries have successfully established local ABHR production as a low-cost alternative within facilities, using WHO-recommended formulations [5].

To highlight the urgent need to save lives by implementing best practices in health care delivery, the slogan for 5 May 2021 is “Seconds save lives – clean your hands” (Figure 1). The WHO campaign calls to action key stakeholders (Table 1) who can play critical roles in achieving optimal hand hygiene at the point of care, in both the current situation and a broader sense,

helping to strengthen society involvement as promoted by the Hand Hygiene for All initiative.

All the information is available on the WHO SAVE LIVES: Clean Your Hands campaign webpage (<https://www.who.int/campaigns/save-lives-clean-your-hands>), including an advocacy toolkit offering guidance on the campaign’s objectives, key messages and how to get involved.

Conflict of interest statement

None.
