Correction to: Impact of a combined multimodal-aerobic and multimodal intervention compared to standard aerobic treatment in breast cancer survivors with chronic cancer-related fatigue - results of a three-armed pragmatic trial in a comprehensive cohort design

Matthias Kröz^{1,2,3,4*}, Marcus Reif⁵, Augustina Glinz², Bettina Berger⁴, Andreas Nikolaou⁶, Roland Zerm^{1,2}, Benno Brinkhaus³, Matthias Girke^{1,2}, Arndt Büssing⁴, Christoph Gutenbrunner⁶ and On behalf of the CRF-2 study group

Correction to: BMC Cancer 17, 166 (2017)

<https://doi.org/10.1186/s12885-017-3142-7>

Following publication of the original article [1], the authors reported the following errors:

1) In Fig. 3 the y-axis is incorrectly labeled as 'Mean (SD)' instead of 'Mean (standard error)', since Fig. 3 in fact shows estimates of mean and standard error of the mean. Figure 3 has been corrected in this correction article. The authors have taken the opportunity to include an editing change by denoting the combination therapy arm as 'CT' instead of 'KT'.

2) There are some discrepancies in the first paragraph of the 'Study-group characteristics' section caused by a mix-up of ITT analyses with analyses based on the full set of initially included patients. In fact, the mean age values range from 56.6 to 60.3 instead of 56.4 to 58.8 years (as correctly shown

in Table 2); and the *p*-values indicating significant group differences of height, rehabilitation, and other disorders are 0.0325, 0.0312, and 0.0369 instead of 0.0168, 0.027, and 0.0313, respectively. None of these changes impair the study outcome or its interpretation in any way.
