This supplemental material has been provided by the authors to give readers additional information about their work.

eFigure 1. Length of Stay Histogram. The x-axis shows the length of stay in days for the cohort. The y-axis shows the number of admissions.

eFigure 2. Monthly ICU and Ventilator Admissions in PHIS. Panel A shows the number of monthly ICU admissions in PHIS between 1/2010 and 6/2020 represented as a line chart. Panel B shows the number of admissions requiring mechanical ventilation for the same time period. Each blue line represents an admission year between 2010 and 2019, with progressively lighter shades of blue representing later years. The black line represents the line of best fit for the data using LOcally Estimated Scatterplot Smoothing (LOESS). The gray bar represents the 95% confidence interval of the regression line. The red line shows the number of monthly admissions from 1/2020 through 6/2020.

eFigure 3. Additional Diagnosis-Specific Monthly Admissions in PHIS. Each panel shows the number of monthly admissions for a specified diagnosis between 1/2010 and 6/2020. As in Figure 1B, each blue line represents an admission year between 2010 and 2019, with progressively lighter shades of blue representing later years. The black line represents the line of best fit for the data using LOcally Estimated Scatterplot Smoothing (LOESS). The gray bar represents the 95% confidence interval of the regression line. The red line shows the number of monthly admissions from 1/2020 through 6/2020. Panel A shows additional general diagnoses, and Panel B shows cardiac diagnoses. ASD: atrial septal defect, COA: coarctation of the aorta, HLHS: hypoplastic left heart syndrome, TOF: Tetralogy of Fallot.

A

B

eFigure 4. Seasonality of Bronchiolitis Pathogens. Each panel shows the number of monthly admissions for viral bronchiolitis between 1/2016 and 12/2019 (limited to the time window during which ICD-10 was in effect). Panels are faceted according to the viral pathogen specified as the primary encounter diagnosis by ICD-10.

eFigure 5. Seasonality of Diabetic Ketoacidosis by Age. Each panel shows the number of monthly admissions for hypoplastic left heart syndrome between 1/2010 and 12/2019. Panels are faceted according to the age at admission, specified in years.

eFigure 6. Seasonality of Hypoplastic Left Heart Syndrome by Age. Each panel shows the number of monthly admissions for hypoplastic left heart syndrome between 1/2010 and 12/2019.

Panels are faceted according to the age at admission, specified in years.

eFigure 7. Ensemble Forecasts for Additional Diagnoses. Each panel shows the predicted number of monthly admissions for a specified diagnosis between 1/2010 and 6/2020, according to ensemble forecasting models including Autoregressive Integrated Moving Average (ARIMA), neural network, and LOcally Estimated Scatterplot Smoothing (LOESS) algorithms weighted on time series cross-validation. All models were trained on data from 1/2010 through 6/2019, and the testing window for each model is shown. The blue line is the model estimate, and the dark and light blue shaded regions are the model 80% and 95% confidence intervals, respectively. The red line is the actual number of admissions for each month. The vertical line represents January 2020. The numbers in the top left and top right of each pane represent the model mean absolute percentage error (MAPE) for 7/2019-12/2019 and 1/2020-6/2020, respectively. Panel A shows additional general diagnoses, and Panel B shows cardiac diagnoses. ASD: atrial septal defect, COA: coarctation of the aorta, HLHS: hypoplastic left heart syndrome, TOF: Tetralogy of Fallot.

B

eFigure 8. GDP-Adjusted Quarterly Total Hospital Charges. Each bar represents the total hospital charges for a given quarter and year in billions of dollars. All charges are adjusted for the Centers for Medicare & Medicaid Services wage/price index according to hospital zip code, and the quarterly Gross Domestic Product provided by the Bureau of Economic Analysis, and expressed in quarter one, 2010 dollars.

eFigure 9. GDP-Adjusted Quarterly Per-Admission Hospital Charges. Each box-and-whiskers plot represents the cost per hospital admission for a given quarter and year in thousands of dollars. The center line represents the median, and the hinges represent the 25th and 75th percentiles. The whiskers extend 1.5 times the interquartile range below and above the 25th and 75th percentiles, respectively. The notch represents the confidence interval of the median and is calculated as 1.58 times the interquartile range divided by the square root of the sample size.

eFigure 10. Seasonality of Exploratory Analyses. The top two panes show all diagnoses coded as “acute respiratory failure” and the bottom two panes show all hospital encounters during which the patient died. The upper left and lower left panes are identical in formatting to Figure 2. Each panel shows the number of monthly admissions for a specified diagnosis between 1/2010 and 6/2020. Each blue line represents an admission year between 2010 and 2019, with progressively lighter shades of blue representing later years. The black line represents the line of best fit for the data using LOcally Estimated Scatterplot Smoothing (LOESS). The gray bar represents the 95% confidence interval of the regression line. The red line shows the number of monthly admissions from 1/2020 through 6/2020. The upper right and lower right panes are identical in formatting to Figure 3. Each panel shows the predicted number of monthly admissions for a specified diagnosis between 1/2010 and 6/2020, according to ensemble forecasting models including Autoregressive Integrated Moving Average (ARIMA), neural network, and LOcally Estimated Scatterplot Smoothing (LOESS) algorithms weighted on time series cross-validation. All models were trained on data from 1/2010 through 6/2019, and the testing window for each model is shown. The blue line is the model estimate, and the dark and light blue shaded regions are the model 80% and 95% confidence intervals, respectively. The red line is the actual number of admissions for each month. The vertical line represents January 2020. The numbers in the top left and top right of each pane represent the model mean absolute percentage error (MAPE) for 7/2019-12/2019 and 1/2020-6/2020, respectively.

eTable 2. Number of Encounters With Included Diagnoses

Diagnosis	Number of Encounters (%)
Appendicitis	113,394 (2.09%)
Atrial Septal Defect	10,787 (0.2%)
Asthma	203,486 (3.75%)
Birth	229,059 (4.22%)
Bronchiolitis	228,637 (4.21%)
Cardiac arrest	1,557 (0.03%)
Coarctation of the Aorta	9,899 (0.18%)
Dehydration	63,291 (1.17%)
Diabetic ketoacidosis	65,688 (1.21%)
Hypoplastic Left Heart Syndrome	11,083 (0.2%)
Kawasaki syndrome	16,653 (0.31%)
Mental health	190,355 (3.51%)
S. pneumoniae	2,818 (0.05%)
Sepsis	64,245 (1.18%)
Tetralogy of Fallot	13,549 (0.25%)
Trauma	221,875 (4.09%)

Note: the percentage shown is a percentage of all PHIS inpatient encounters.
