### Correction to: Pediatric Nephrology

<https://doi.org/10.1007/s00467-019-04344-1>

The original version of this article unfortunately contained a mistake. In the third paragraph of “Discussion,” two references were missing. The correct wording is “Since several studies have documented that a higher eplet mismatch load between donor and recipient is associated with poor transplant outcomes [50, 54], it is important to understand the reason for the observed outcomes in the DRT group compared with the SRT group.”

In addition, reference [54] is missing in the original. Please find the two cited references below.

---
