## Abstract

An updated checklist of Croatian flesh flies is presented based on the literature, on material collected from 2004 to 2017, and on specimens in museum collections. The checklist comprises 22 genera and 148 species (two left unnamed), 105 of which are represented by new Croatian records. Twenty-five species are recorded from Croatia with certainty for the first time: *Amobia pelopei* (Rondani, 1859), *Apodacra seriemaclulata* Macquart, 1854, *Craticulina tabaniformis* (Fabricius, 1805), *Macronychia striginervis* (Zetterstedt, 1838), *Metopia campestris* (Fallén, 1810), *Miltogramma brevipila* Villeneuve, 1911, *Miltogramma iberica* Villeneuve, 1912, *Miltogramma oestracea* (Fallén, 1820), *Miltogramma punctata* Meigen, 1824, *Oebalia cylindrica* (Fallén, 1810), *Phylloteles pictipennis* Loew, 1844, *Senotainia conica* (Fallén, 1810), *Taxigramma hilarella* (Zetterstedt, 1844), *Taxigramma stictica* (Meigen, 1830), *Agria monachae* (Kramer, 1908), *Nyctia lugubris* (Macquart, 1843), *Blaesoxipha (Blaesoxipha) aurulenta* Rohdendorf, 1937, *Blaesoxipha (Blaesoxipha) batilligera* Séguéy, 1941, *Blaesoxipha (Blaesoxipha) plumicornis* (Zetterstedt, 1859), *Sarcophaga (Helicophagella) okaliana* (Lehrer, 1975), *Sarcophaga (Heteronychia) amita* Rondani, 1860, *Sarcophaga (Heteronychia) ancilla* Rondani, 1865, *Sarcophaga (Heteronychia) pseudobenaci* (Baranov, 1942), *Sarcophaga (Myorhina) lunigera* Böttcher, 1914 and *Sarcophaga (Stackelbergeola) mehadiensis* Böttcher, 1912. *Taxigramma hilarella*, *Nyctia lugubris*, *Agria monachae*, *Blaesoxipha (Blaesoxipha) aurulenta* and

*Sarcophaga* (*Heteronychia*) *amita* are recorded from Southeast Europe with certainty for the first time. The species *Sarcophaga* (*Sarcophaga*) *hennigi* Lehrer, 1978 is omitted from the list, as previous records from Croatia are shown to be based on an erroneous synonymy with *Sarcophaga novaki* Baranov, 1941 (= *Sarcophaga* (*Sarcophaga*) *croatica* Baranov, 1941). *Blaesoxipha* (*Blaesoxipha*) *rufipes* (Macquart, 1839) could not be confirmed from Croatia and is not included in the checklist. Three new synonymies are proposed: *Golania* Lehrer, 2000 = *Thyrsocnema* Enderlein, 1928, **syn. nov.**, *Parasarcophaga* (*Liosarcophaga*) *kovatschevitchi* Strukan, 1970 = *Sarcophaga* (*Liosarcophaga*) *marshalli* Parker, 1923, **syn. nov.**, and *Sarcophaga subvicina* ssp. *novaki* Baranov, 1941 = *Sarcophaga* (*Sarcophaga*) *croatica* Baranov, 1941, **syn. nov.** As part of an effort to update the European distributions of all Croatian species, the following new national and regional records are also provided: *Miltogramma brevipila*, *Miltogramma taeniata* Meigen, 1824 and *Sarcophaga* (*Heteronychia*) *pandellei* (Rohdendorf, 1937) new to Greece; *Sarcophaga* (*Liosarcophaga*) *harpax* Pandellé, 1896 and *Sarcophaga* (*Sarcophaga*) *croatica* new to Italy (respectively mainland and mainland and Sicily); *Miltogramma iberica* new to Bulgaria and Sardinia; *Pterella convergens* (Pandellé, 1895) new to mainland Italy and Sicily; *Nyctia lugubris* new to mainland Italy and Sardinia; *Blaesoxipha* (*Blaesoxipha*) *litoralis* (Villeneuve, 1911) new to Sardinia and thus confirmed for Italy; *Apodacra seriemaculata*, *Macronychia striginervis*, *Protomiltogramma fasciata* (Meigen, 1824) and *Blaesoxipha* (*Blaesoxipha*) *ungulata* (Pandellé, 1896) new to Sardinia and Sicily; *Macronychia dolini* Verves & Khrokalo, 2006, *Macronychia polyodon* (Meigen, 1824), *Metopia argyrocephala* (Meigen, 1824), *Senotainia albifrons* (Rondani, 1859), *Taxigramma multipunctata* (Rondani, 1859), *Taxigramma stictica*, *Blaesoxipha* (*Blaesoxipha*) *unicolor* (Villeneuve, 1912) and *Sarcophaga* (*Helicophagella*) *agnata* Rondani, 1860 new to Sardinia; *Metopodia pilicornis* (Pandellé, 1895), *Miltogramma oestracea*, *Miltogramma rutilans* Meigen, 1824, *Nyctia halterata* (Panzer, 1798), *Blaesoxipha* (*Blaesoxipha*) *lapidosa* Pape, 1994 and *Blaesoxipha* (*Blaesoxipha*) *plumicornis* new to Sicily.

## Introduction

Sarcophagidae, commonly known as flesh flies because many species feed on the soft tissues of animals (Povolný and Verves 1997), comprise ca 2800 species worldwide (Pape 1996 and unpublished) and are currently divided into three subfamilies: Miltogramminae, Paramacronychiinae and Sarcophaginae (Pape 1996). The flesh fly fauna of Croatia has been poorly studied. The earliest data were published between the mid-19<sup>th</sup> century and the beginning of the 20<sup>th</sup> century (Schiner 1862; Brauer and Bergenstamm 1891; Strobl 1893, 1900, 1904; Böttcher 1912, 1913; Langhoffer 1920; Rohdendorf 1937), whereas the first studies more specifically focused on Croatian flesh flies were undertaken before and during World War II by Baranov (1928, 1929, 1930, 1931, 1938, 1939, 1940, 1941a, 1941b, 1942, 1943), who provided information on the general morphology and taxonomy of Croatian Sarcophaginae as well as descriptions and identification keys. Baranov's work was continued by Strukan (1964, 1967, 1968, 1970), and further data were added after the breakup of Yugoslavia by Povolný and Znojil (1994), Rucner (1994), Pape (1996), Povolný and Znojil (1998, 1999), Pape (2004), Whitmore (2011) and Whitmore et al. (2013). The primary aim of this paper is to summarize all available data on the flesh fly fauna of Croatia, based on a critical review of literature records, on data obtained from recent collecting (2004–2017),

and on older specimens in the collections of the Natural History Museum of Denmark (Copenhagen), the National Museum of Natural History, Smithsonian Institution (Washington, D.C.), the Natural History Museum (London) and Museum für Naturkunde (Berlin). We also report 33 new national and regional species records for Bulgaria, Greece, Italy, Sardinia and Sicily.

## Materials and methods

### Study area

Croatia has an area of 56,542 square kilometers and borders with Slovenia, Hungary, Bosnia and Herzegovina, Serbia, Montenegro and Italy. The country is divided into three biogeographical regions: Pannonian-Peripannonian, Alpine, and Mediterranean (Bertić et al. 2001). The Pannonian-Peripannonian region extends between the rivers Drava, Sava and Danube, the Alpine region covers the area of the Dinaric Alps, Gorski Kotar and Lika, whereas the Mediterranean region extends along the Adriatic coast and includes a multitude of islands, cliffs and ridges. The study area includes 38 localities belonging to the Mediterranean, Alpine and Pannonian-Peripannonian regions of Croatia (Figs 1–6, Table 1).

### Specimen sampling and identification

The recent sampling effort was carried out between 2004 and 2017. Most flies were collected with hand nets, with additional specimens collected by Malaise traps, plastic bottle traps and multipurpose traps used to collect biting flies. Specimens were preserved in 96% ethanol or killed in ethyl acetate and pinned shortly after sampling. Male terminalia were extended *in loco* when specimens were still fresh, or male and female terminalia were dissected at a later stage following the method described by Richet et al. (2011). Male abdomens were removed and soaked in a 10% KOH solution for 72 hours, immersed in 10% acetic acid for one minute and rinsed in water for another minute before being dehydrated in beech-wood creosote for four hours; the phallus, pre- and postgonites, sternite 5, cerci and surstyli were separated from the rest of the abdomen, placed in a drop of Canada balsam on a microscope slide and covered with a coverslip. Female abdomens were detached, washed in an ethanol solution and left to macerate in a 10% KOH solution for one hour; abdomen tips were then separated by cutting the membrane between the last two tergites, and rinsed in acetic acid and water before being left between slide and coverslip in beech-wood creosote for a period of four hours; they were then mounted in Canada balsam between two coverslips. Identifications were carried out using current keys for Sarcophagidae (Pape 1987; Povolný and Verves 1997; Richet et al. 2011) and descriptions and illustrations in Whitmore (2010, 2011), Whitmore et al. (2013) and Whitmore and Perry (2018).

### Format of checklist

The nomenclature and classification follow the Fauna Europaea database (Pape 2004). For newly collected and museum material, the following information is provided for each record: locality and date of collection, collector(s), number and sex of specimens, and depository; for previously published records, literature sources are listed in chronological order together with locality information, if available. In both sections, main localities (e.g., city, village, island, mountain) are separated by semicolons (viz., Zmajevac; Zagreb; Pag Is.; Medvednica). When two locality names are separated by a comma, the second locality is the exact sampling site and is subordinate to the main locality (e.g., Brač Is., Bol; Medvednica, Medvedgrad; Otočac, Metla; Ston, Broce). Species marked with a black triangle (▲) are recorded for Croatia with certainty for the first time. Species marked with an asterisk (\*) are recorded for Croatia based on unverified literature records only. European distributions are derived from Séguy (1941), Pape et al. (1995), Pape (1996), Povolný (1997, 1999), Panu et al. (2000), Pape (2004), Whitmore (2009a, 2009b, 2010), Gaglio et al. (2011), Richet et al. (2011), Whitmore (2011), Richet et al. (2013), Verves and Khrokalo (2014), Whitmore (2016) and Whitmore and Perry (2018), and listed according to the Fauna Europaea format for countries and regions (Pape et al. 2015). Geographic coordinates of recent Croatian sampling localities are given in Table 1. All specimens examined for this study are de-

in the second author's private collection (DW; currently Stuttgart, Germany). Croatian records published by Strobl (1893, 1900, 1904), Langhoffer (1920), Baranov (1928, 1929, 1930, 1931, 1938, 1939, 1940, 1941a, 1941b, 1942, 1943), Mikačić (1938), Strukan (1964, 1967, 1968, 1970), Povolný (1987), Sisojević et al. (1989), Rucner (1994), Pape (1996), Szpila (2010), Whitmore (2011) and Whitmore et al. (2013) are mostly based on specimens deposited in the following collections: NMNH; NHMD;

NHMUK; DW; Moravské Muzeum, Brno, Czech Republic; Naturhistoriska Riksmuseet, Stockholm, Sweden; Centro Nazionale per lo Studio e la Conservazione della Biodiversità Forestale “Bosco Fontana”, Verona, Italy; Department of Ecology and Biogeography, Nicolaus Copernicus University, Toruń, Poland; Croatian Natural History Museum, Zagreb, Croatia; Institute for Biological Research “Siniša Stanković”, Belgrade, Serbia; National Museum of Bosnia and Herzegovina, Sarajevo, Bosnia and Herzegovina; Natural History Museum, Admont, Austria.

## Results

Altogether, 1534 specimens were examined from Croatia and other Mediterranean countries. New locality records are provided for 132 species, including new Croatian records for 105 species. In Croatia, the highest number of species (72) was recorded in the Mediterranean region, followed by the Pannonian-Peripannonian region with 48 species and the Alpine region with 39 species. The most common species in this study was *Sarcophaga (Sarcophaga) croatica* Baranov, 1941 with 233 specimens from 12 localities. The next most common species were *S. (Sarcophaga) lehmanni* Müller, 1922 with 172 specimens from 14 localities, *S. (Parasarcophaga) albiceps* Meigen, 1826 with 70 specimens from 7 localities, and *S. (Bellieriomima) subulata* Pandellé, 1896 with 40 specimens from 5 localities. The updated checklist of Croatian Sarcophagidae consists of 148 species (two left unnamed): 104 in the subfamily Sarcophaginae, 35 in the subfamily Miltogramminae and 9 in the subfamily Paramacronychiinae. The majority of species belong to the genus *Sarcophaga* Meigen (88), followed by *Blaesoxipha* Loew (15), *Miltogramma* Meigen (11), and *Macronychia* Rondani, *Pterella* Robineau-Desvoidy, *Sphenometopa* Townsend and *Taxigramma* Perris (3 each). The remaining 15 genera are represented by one or two species each. Two species previously recorded from Croatia are omitted from the checklist. *Blaesoxipha rufipes* (Macquart, 1839) was listed from Croatia (Pape 1994, 1996; Verves and Khrokalo 2014) based on a misreading of Baranov (1942). Records of *Sarcophaga (Sarcophaga) hennigi* Lehrer, 1978 are based on an erroneous synonymy, as discussed below under *S. (S.) croatica*. As part of an effort to update the distributions of all Croatian species, we here firstly report the occurrences of one species for Bulgaria, three species for Greece (Corfu), two species for Italy, 15 species for Sardinia and 12 species for Sicily (for details, see Abstract and Remarks under individual species).

NB: These Sardinian specimens do not all fall within the range of variation of *T. multipunctata* defined by Richet et al. (2013), particularly with regard to setation of the parafacialia. Further studies are required to determine whether *T. multipunctata sensu auct.* is a morphologically variable species or a species complex.

### 35. *Taxigramma stictica* (Meigen, 1830) (▲)

#### 41. *Sarcophila latifrons* (Fallén, 1817)

New records: Tribanj-Kruščica, Ljubotić, 14.VI.2012, E. Buenaventura, T. Pape, D. Whitmore leg. (2♀, 6♂) (NHMD).

Literature records: Rijeka; Hvar (Strobl 1893); Dubrovnik; Hvar; Krka Falls; Split (Strobl 1900); Zadar (Strobl 1904); Senj (Langhoffer 1920); Baranov (1928, 1938).

European distribution: Albania, Austria, Belarus, Belgium, Bulgaria, Croatia, Czech Republic, Denmark (mainland), France (mainland), Germany, Greece (mainland), Hungary, Italy (mainland), Lithuania, Luxemburg, Poland, Romania, Russia (Central European Territory, South European Territory), Slovakia, Spain (mainland, Canary Is.), Sweden, Switzerland, The Netherlands, Ukraine, United Kingdom.

#### 42. *Sarcophila* sp.

Records: Brač Is., Bol, 4.VIII.2004, D. Whitmore leg. (1♀) (DW); same locality, 5.VIII.2004, D. Whitmore leg. (4♀, 1♂) (DW); Hvar Is., Dubovica, 12.VIII.2004, D. Whitmore leg. (1♀, 1♂) (DW); Pakleni Is., Sveti Klement, 8.VIII.2004, D. Whitmore leg. (1♀) (DW).

Remarks: The above-listed specimens belong to a common and widespread Mediterranean species or species complex, of which we have examined numerous specimens also from Corsica, Greece (incl. Corfu), and southern and insular Italy. Pending the examination of type material in the framework of a full revision of the genus *Sarcophila* Rondani, we prefer to leave these specimens unnamed for the time being.

#### 43. *Wohlfahrtia magnifica* (Schiner, 1862)

Literature records: Baranov (1928); Dubrovnik, nr Loznica; Osijek (Baranov 1943).

European distribution: Albania, Austria, Belarus, Bulgaria, Croatia, Cyprus, Czech Republic, France (mainland), Germany, Greece (mainland), Hungary, Italy (mainland, Sardinia, Sicily), Lithuania, Moldova, Poland, Portugal (mainland), Romania, Russia (Central European Territory, South European Territory), Serbia, Slovakia, Spain (mainland), Ukraine.

Remarks: Larvae recorded on sheep by Mikačić (1938) were identified as belonging to *W. magnifica*. However, these records should be treated with caution because the larvae of *Wohlfahrtia* Brauer & Bergenstamm are difficult to identify to species level.

#### 44. *Wohlfahrtia meigenii* (Schiner, 1862) (\*)

Literature records: Langhoffer (1920); Baranov (1928).

European distribution: Austria, Belarus, Belgium, Bulgaria, Croatia, Czech Republic, Denmark (mainland), France (mainland), Germany, Hungary, Italy (mainland), Latvia, Lithuania, Moldova, Poland, Romania, Russia (Central European Territory, South European Territory), Slovakia, Spain (mainland), Switzerland, Ukraine.

Remarks: Unverified record. Although male and female terminalia provide important characters for distinguishing *W. meigenii* from other closely related species of *Wohlfahrtia*, misidentifications in older generalist publications cannot be ruled out. The taxonomy of the nominal taxa *W. meigenii* (Schiner) and *W. vigil* (Walker) is unsettled, as discussed by Hall et al. (2009) and Ge et al. (2018). We are here using *W. meigenii* due to its Palaearctic type locality and because this was the name used by Langhoffer (1920) and Baranov (1928).

### Subfamily Sarcophaginae Macquart, 1834

#### 45. *Blaesoxipha (Blaesoxipha) arenicola* Rohdendorf, 1928

### 133. *Sarcophaga (Sarcophaga) cf. bergi* Rohdendorf, 1937

New records: Plitvička jezera National Park, Turčić, 16.VI.2012, E. Buenaventura, T. Pape, D. Whitmore leg. (1♂) (NHMD).

European distribution: Bulgaria, Croatia, Ukraine.

Remarks: The single male of this species examined from Croatia is morphologically very similar to *S. bergi*, but differs in certain features of the distiphallus and in the shape of the cercus in lateral view. It may belong to a different species, but more material and more detailed studies are needed to confirm this.

Krčmar leg. (15♂) (DBUO); Slatinski Drenovac, 17.VIII.2017, S. Krčmar leg. (4♂) (DBUO).

Literature records: Zagreb; Samobor; Kaštel Sućurac; Pag Is. (Baranov 1941b, 1942, as *subvicina* ssp. *croatica* and *subvicina* ssp. *novaki* Baranov); Pape (2004).

Distribution: Croatia, Italy (mainland, Sicily).

Remarks: This species, which was the most abundant flesh fly in recent Croatian samples, is common and widespread also in Italy where it had previously been confused with the closely related *S. variegata* (Scopoli, 1763) (Whitmore et al., unpubl. data). We here formally record this species from Italy for the first time (238♂ from Liguria, Lombardy, Umbria, Lazio, Abruzzo, Campania, Basilicata, Calabria and Sicily, 1995–2015, DW and Museo di Zoologia, Sapienza Università di Roma). Records of *Sarcophaga variegata* from Sardinia (see Whitmore 2009a) may possibly also refer to *S. croatica*. Literature records of “*S. croatica*” from Corsica (e.g., Jordaens et al. 2013) refer to the Corsican endemic *S. matilei* Blackith, Richet, Pape and Andrei-Ruiz, 2001. Based on our recent examination of the holotype male of *Sarcophaga subvicina* ssp. *croatica* Baranov, 1941 (NMNH) and of photographs of the holotype male of *Sarcophaga subvicina* ssp. *novaki* Baranov, 1941 (NMNH), we propose *Sarcophaga subvicina* ssp. *novaki* Baranov, 1941 as a junior synonym of *Sarcophaga (Sarcophaga) croatica* Baranov, 1941, syn. nov. This synonymy means that *S. (S.) hennigi* Lehrer, 1978 has not been recorded from Croatia. The previous listings of “*hennigi*” or “*novaki*” from Croatia by Verves (1986), Povolný (1996), Povolný and Verves (1997), Pape (1996, 2004) and Verves and Khrokalo (2014) were based on the erroneous synonymy with *S. novaki* proposed by Povolný and Verves (1987).

Remarks: Records of the occurrence of *Sarcophaga incisilobata* in Sicily (e.g., Pape et al. 1995; Povolný 1999) refer to an undescribed species that also occurs in southern mainland Italy (Whitmore et al., unpubl. data).

#### 147. *Sarcophaga (Thyrsocnema) platariae* (Povolný, 1992)

New records: Komin, 16.VII.2014, S. Krčmar leg. (1♂) (DBUO).

Literature records: Pape (2004).

European distribution: Croatia, Greece (mainland).

Remarks: Povolný (1992) described *Thyrsocnema platariae* from a single male collected in Greece. He tentatively placed it in *Thyrsocnema* Enderlein based on the shape of the cercus and sternite 5, whereas Pape (1996: 418) later listed it as *incertae sedis* within *Sarcophaga*. A new genus was created by Lehrer (2000) for *Golania israeliana* Lehrer, 2000. This species was synonymised with *Thyrsocnema platariae* by Pape (2004), who placed it in *Sarcophaga*, subgenus *Golania* Lehrer. Based on our study of recent material from Croatia (above) and Greece, we agree with Povolný's original placement in *Thyrsocnema* and propose *Golania* Lehrer, 2000 as a junior synonym of *Thyrsocnema* Enderlein, 1928, syn. nov., at the subgeneric rank.

#### 148. *Sarcophaga (Varirosellea) uliginosa* Kramer, 1908

Literature records: Oprić (Sisojević et al. 1989); Pape (2004).

European distribution: Albania, Austria, Belarus, Bulgaria, Croatia, Czech Republic, Denmark (mainland), France (mainland), Germany, Greece (mainland), Hungary, Italy (mainland, Sardinia), Moldova, Poland, Romania, Russia (Central European Territory, South European Territory), Slovakia, Spain (mainland), United Kingdom.

### Discussion

Twenty-five species of Sarcophagidae are newly recorded from Croatia as part of this study. Most of these are widely distributed in Europe, which shows that the flesh fly fauna of Croatia is still superficially known. Twenty of them were collected from single localities only. *Sarcophaga (Sarcophaga) croatica* was the most abundant species in this study and was most common in the Pannonian-Peripannonian region. It was collected in a variety of habitats, from forest edges and grassland to river and lake banks

and the seashore in the Mediterranean region. *Sarcophaga* (*Sarcophaga*) *lehmanni* was the second most abundant species and was mainly collected in wet grasslands, forest edges and open habitats (grasslands, agricultural land), showing broad habitat preferences. Similar habitat preferences were observed for *S. (S.) lehmanni* in Poland (Draber-Mońko 1998; Szpila 1999; Szpila et al. 2015). *Sarcophaga* (*Parasarcophaga*) *albiceps* was the third most numerous species and was mostly collected in grasslands around ponds in the locality of Zmajevac in the Pannonian-Peripannonian region and near freshwater lakes in the Mediterranean region. This confirms a preference for open habitats, as this species was also one of the most abundant species in grasslands in Poland (Szpila et al. 2015). Sixteen of the newly-recorded species, *Amobia pelopei*, *Craticulina tabaniformis*, *Macronychia striginervis*, *Metopia campestris*, *Miltogramma iberica*, *M. punctata*, *Oebalia cylindrica*, *Phylloteles pictipennis*, *Senotainia conica*, *Taxigramma hilarella*, *T. stictica*, *Blaesoxipha* (*Blaesoxipha*) *plumicornis*, *S. (Heteronychia) amita*, *S. (H.) ancilla*, *S. (H.) pseudobenaci*, and *S. (Myorhina) lunigera*, were already known from the neighbouring Bosnia and Herzegovina, Hungary or Serbia (Pape 1996, 2004). Besides being a new country record, that of *S. (Helicophagella) okaliana* is also just the second record from Southeast Europe. Of the 105 species examined during this study, the following have a limited area of distribution: *Sphe-nometopa variegata*, *B. (Blaesoxipha) aurulenta*, *S. (H.) croca*, *S. (H.) giganta*, *S. (S.) adriatica*, *S. (S.) croatica*, *S. (S.) pagensis* and *S. (Thyrsoxema) platariae*. Until now, these eight species have been recorded in one to three European countries only, and four of them were described based on specimens collected in Croatia (Baranov 1939, 1941b; Povolný 1987; Pape 1996). The other species recorded in this study are widely distributed throughout Europe and beyond (Pape 1996, 2004). The 57 species recorded by Baranov (1928, 1929, 1930, 1931, 1938, 1939, 1940, 1941a, 1941b, 1942, 1943) and the 18 species recorded by Strukan (1964, 1967, 1968, 1970) were confirmed in this study. Our recent identifications and examination of the literature have enabled us to update the checklist of Croatian flesh flies to 148 species (including two left unnamed). The several new country records indicate that further studies of the flesh fly fauna of Croatia are necessary.

## Acknowledgements

We are grateful to Torsten Dikow (NMNH) for the loan of material and for photographs of the holotype of *Sarcophaga novaki*, and to Maurizio Mei (Sapienza Università di Roma, Rome) for access to specimens in his personal collection and in the collection of Museo di Zoologia, Sapienza Università di Roma.
