

Supplementary Figure 1. Expression of driver microRNAs in EV. The boxplots show the gene expression levels (log-transformed) of the six potential drivers microRNAs in EV across the HD, OB and OBDM samples. Wilcoxon-test was used to perform pairwise-comparisons and statistical significance was indicated by the star symbols (i.e., ns: $p > 0.05$, *: $p \leq 0.05$, **: $p \leq 0.01$, ***: $p \leq 0.001$, ****: $p \leq 0.0001$).
