

Limited evidence of zoonotic TB in people in contact with TB-infected cattle, despite high and prolonged exposure

90 people with occupational contact to TB-infected cattle took part...

from 73 farms with a history of bovine TB in Southwest England...

One person tested positive for a TB immune response

? Risk Groups Explained

Electronic bovine TB testing data informed zTB risk, based on the number of TB-infected cattle per farm

Low risk farms:
less than **10** TB-positive cattle since 2011 on average

Medium risk farms:
61 TB-positive cattle since 2011 on average

High risk farms:
129 TB-positive cattle since 2011 on average

Consumption of raw milk

We identified a high-risk group of farmers who should be prioritised for future engagement
