The correction includes the acknowledgment of a source of funding from the NIH, which was inadvertently omitted in the original submission due to an oversight. The corrected acknowledgment is shown below.

## ■ ACKNOWLEDGMENTS

The authors dedicate this work to the memory of Dr. Dimitrios Morikis who, through his devoted mentoring, passed down his love and passion for biophysics and bioengineering to the next generation of scientists and engineers. The authors thank Dr. Wolfgang Hoyer and Dr. Georgios Archontis for useful discussions. This work was supported in part by the Texas A&M University Graduate Diversity Fellowship from the TAMU Office of Graduate and Professional Studies (A.A.O.), as well as the National Institute on Aging, NIH, R03 AG058100 (P.T.) and startup funding by the Artie McFerrin Department of Chemical Engineering at Texas A&M University (P.T.). All MD simulations and energy calculations were conducted using the Ada and Curie supercomputing cluster and additional computational resources available to P.T. at the Texas A&M High Performance Research Computing Facility and the Artie McFerrin Department of Chemical Engineering.
