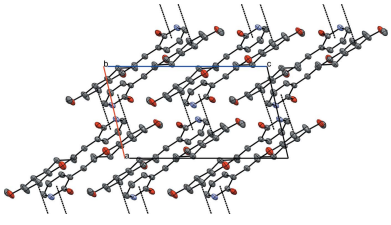
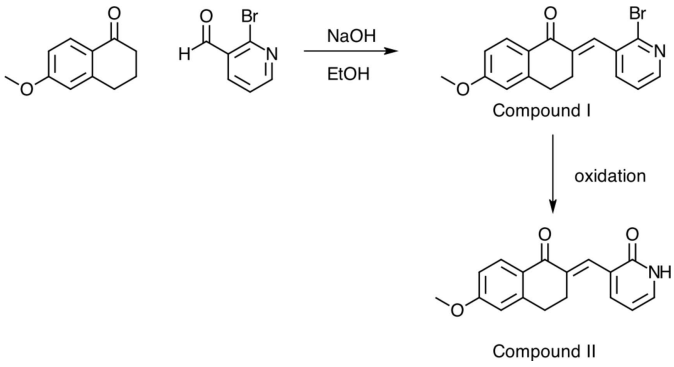
The title compounds $C_{17}H_{14}BrNO_2$, (I), and $C_{17}H_{15}NO_3$, (II), were obtained from the reaction of 6-methoxy-3,4-dihydro-2*H*-naphthalen-1-one and 2-bromonicotinaldehyde in ethanol. Compound (I) was the expected product and compound (II) was the oxidation product from air exposure. In the crystal structure of compound (I), there are no short contacts or hydrogen bonds. The structure does display π–π interactions between adjacent benzene rings and adjacent pyridyl rings. Compound (II) contains two independent molecules, *A* and *B*, in the asymmetric unit; both are non-planar, the dihedral angles between the methoxybenzene and 1*H*-pyridin-2-one mean planes being 35.07 (9)° in *A* and 35.28 (9)°in *B*. In each molecule, the 1*H*-pyridin-2-one unit participates in intermolecular N—H···O hydrogen bonding to another molecule of the same type (*A* to *A* or *B* to *B*). The structure also displays π–π interactions between the pyridyl and the benzene rings of non-equivalent molecules (*viz*., *A* to *B* and *B* to *A*).

1. Chemical context

In order to address the need for new therapeutic agents, medicinal chemists have often looked to nature for inspiration. Our research strategy to synthesize novel compounds considered analogs of the natural product chalcone, which contains two aromatic rings and an α-β-unsaturated ketone. Chalcones, bioactive defense molecules found in plants and used in traditional Chinese medicine, have demonstrated anticancer, antibacterial, antifungal, and anti-inflammatory properties (Nowakowska, 2007; Katsori *et al.*, 2011). Chalcones that contain methoxy groups (Shenvi *et al.*, 2013; Bandgar *et al.*, 2010) and/or pyridine groups (Prasad *et al.*, 2008; Yee *et al.*, 2005) have demonstrated activity against a variety of cancer cell lines and antibiotic-resistant bacteria. Thus, we set out to create a library of chalcones that combine those two functional groups. During the synthesis of the title compound (I) by the Claisen–Schmidt condensation of 6-methoxy-3,4-dihydro-2*H*-naphthalen-1-one and 2-bromonicotinaldehyde, two different types of crystals were obtained – those of the desired chalcone (I) and those of the oxidized product (II). The title compound (I) is a chalcone analog of one currently being studied for its potential anticancer and antibacterial activity [unpublished results].





2. Structural commentary

Compound (I) is non-planar (Fig. 1) with the pyridyl and the benzene ring being rotated by 73.61 (11)°. The C1—Br1 bond distance is 1.916 (4) Å. In compound (II), which presents two independent molecules in the asymmetric unit (*A* and *B*, Fig. 2), the Br atom is replaced by an oxygen atom, with C—O distances O1*A*—C1*A* = 1.258 (3) and O1*B*—C1*B* = 1.257 (3) Å. The molecules are also non-planar, the benzene–pyridyl angle being 36.18 (10)° in *A* and 35.91 (10)° in *B*.

3. Supramolecular features

In the crystal structure of (I), molecules are linked by Br···π and π–π interactions. The Br1···*Cg*1^{i} distance is 3.635 (3) Å [symmetry code: (i) $-1+x, y, z$; *Cg*1 is the centroid of the benzene ring] and has a 'face-on' geometry. There are two π–π interactions in the crystal between adjacent benzene rings, *Cg*1···*Cg*1^{ii} = 3.944 (4) Å [symmetry code: (ii) $1-x, 1-y, 1-z$] and between adjacent pyridyl rings, *Cg*2···*Cg*2^{iii} = 3.639 (4) Å [symmetry code: (iii) $-x, 1-y, -z$]. The π–π interactions form ribbons in the $(\bar{1}01)$ plane (Fig. 3), which are held together by the Br···π interactions (Fig. 4).

In each one of the independent molecules in (II), the 1*H*-pyridin-2-one unit participates in intermolecular N—H···O hydrogen bonding, with a classical $R_2^2(8)$ synthon, to another molecule of the same type (*A* to *A* or *B* to *B*), see Fig. 5 and Table 1 for details. These hydrogen-bonding interactions form dimers that are reminiscent of those frequently observed between carboxylic acids. The hydrogen-bonded units are linked by π–π stacking interactions between the benzene and pyridyl rings in adjacent molecules of different type (*A*–*B* or

4. Database survey

A search of the Cambridge Structural Database (Version 5.37 with four updates, Groom *et al.*, 2016) for structures containing the combined tetralone and pyridine backbone returned no hits. The search was broadened by changing the nitrogen to carbon, which returned 43 hits. The carbon–containing version of (I) has been reported (Dimmock *et al.*, 2002; Yee *et al.*, 2005). Many of these similar chalcones also demonstrated biological activities (Dimmock *et al.*, 2002).

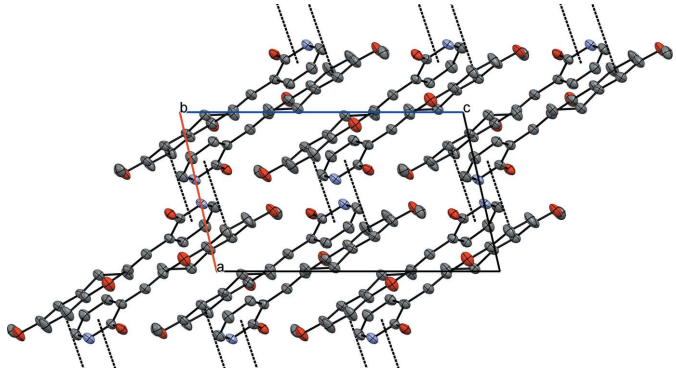

Figure 6
The hydrogen-bonded units in (II) are linked by π–π stacking interactions between the phenyl and pyridyl rings in adjacent molecules of different type.

5. Synthesis and crystallization

6-Methoxy-3,4-dihydro-2*H*-naphthalen-1-one (1 mmol) and 2-bromonicotinaldehyde (1 mmol) were dissolved in ethanol (5 mL). An NaOH solution (5 M, 1 mL) was added and the reaction was stirred until a precipitate formed. The reaction mixture was cooled in an ice bath for 20 minutes. The solids were filtered off and recrystallized from MeOH/H_2O. Slow evaporation of a methanolic solution gave dark purple/brown crystals, which proved to be 3-[(*E*)-(6-methoxy-1-oxo-1,2,3,4-tetrahydronaphthalen-2-idene)methyl]pyridin-2(1*H*)-one, (II), and lighter purple crystals which proved to be (*E*)-2-[(2-bromopyridin-3-yl)methylidene]-6-methoxy-3,4-dihydronaphthalen-1(2*H*)-one, (I).

6. Refinement

Crystal data, data collection and structure refinement details are summarized in Table 2. All H atoms were positioned geometrically and refined as riding with C—H = 0.95 or 0.98 Å and U_{iso}(H) = 1.2U_{eq}(C).

Hydrogen site location: inferred from neighbouring sites
H atoms treated by a mixture of independent and constrained refinement
$w = 1/[\sigma^2(F_o^2) + (0.0585P)^2 + 0.2529P]$ where $P = (F_o^2 + 2F_c^2)/3$
$(\Delta/\sigma)_{max} < 0.001$

Special details

Refinement. Refinement was performed using all reflections. The weighted R-factor (wR) and goodness of fit (S) are based on F^2. R-factor (gt) are based on F. The threshold expression of F^2 > 2.0 sigma(F^2) is used only for calculating R-factor (gt).
