Discovery of Viviparous Fish in Louisiana.

NEW ORLEANS, Nov. 1, 1854.

" What have we here ? A fish—a strange fish."—*The Tempest.*

In the month of October, 1854, through the politeness of J. C. B. Harvey, M. D., of Tchoupitoulas street, I received a small osseous fish, caught in the New Orleans canal, which connects the city with Lake Pontchartrain. This fish had been placed in a basket containing crabs, one of which wounded it slightly in the abdomen near the cloaca, thereby exposing several foetal fish, enveloped in a delicate membrane. The parent fish, which had been rudely thrust into a narrow mouthed vial of spirits, retains after immersion for two weeks, the original *rigor mortis*, and the same remark applies to the foetuses, though they have been soaked in water; some of them have been forcibly straightened. On the 17th of October, in the presence of, and assisted by, Drs. J. Hale and M. Dowler, I enlarged the wound and proceeded to dissect a somewhat globular mass of foetuses bounded by the intestines before, and separated from them by an indescribably thin, diaphanous membrane; this
