eTable 12. ORs (95% CIs) of Healthy Aging Associated With Isocaloric Substitution of Carbohydrate (Total, High-Quality, or From Whole Grains) for Other Macronutrients Modeled in 5%-Energy Increments in 47,513 Participants in the Nurses' Health Study

eTable 13. ORs (95% CIs) of Healthy Aging According to Baseline (1984/1986) Total Carbohydrate Intake and Glycemic Load Stratified by GI and AHEI Among 47,513 Participants in the Nurses' Health Study

eTable 14. ORs (95% CIs) of Healthy Aging (n = 3,706) Assessed in 2014/2016 According to the Dietary Glycemic Load Cross-Classified by Total Dietary Fiber Levels Assessed in 1984/1986 Among 47,513 Participants in the Nurses' Health Study

This supplemental material has been provided by the authors to give readers additional information about their work.

eFigure. Participant Flow Chart

a. Healthy agers met our healthy aging definition: being free from 11 major chronic diseases, having no impairment in memory or physical function, and being in good mental health.

b. Usual agers did not meet the definition of healthy aging for one or more domains (having a diagnosis of 1 of 11 chronic diseases, having impairments in memory or physical function of mental health), Participants who died before 2016 were also considered usual agers in our study.

eTable 1. Baseline Age-Adjusted Characteristics of Participants in the Nurses' Health Study

	Participants in the present study (n=47,513)	Participants with valid dietary and healthy aging assessments (n=61,264)	Excluded participants (n=34,179)	Participants with valid 1984 and 1986 FFQ (n=81,692)
Age, years ^a	48.5 (6.2)	50.6 (7.3)	55.3 (6.1)	50.5 (7.2)
Total carbohydrates, % energy ^b	47.0 (7.1)	47.2 (7.2)	47.2 (7.1)	47.1 (7.2)
High-quality carbohydrates, % energy ^{b,c}	13.6 (5.6)	14.2 (5.6)	14.0 (5.9)	13.8 (6.2)
Refined carbohydrates, % energy ^{b,d}	23.2 (6.1)	22.9 (6.1)	22.9 (6.0)	23.0 (6.1)
Carbohydrates from refined grains, % energy ^b	11.1 (3.0)	10.5 (3.3)	10.3 (3.5)	10.5 (3.4)
Carbohydrates from whole grains, % energy ^b	2.3 (2.1)	2.4 (2.2)	2.5 (2.3)	2.4 (2.2)
Carbohydrates from fruits (excluding fruit juice), % energy ^b	6.8 (3.8)	7.3 (3.9)	7.2 (4.0)	7.1 (3.9)
Carbohydrates from vegetables (excluding potatoes and legumes), % energy ^b	3.4 (1.4)	3.4 (1.4)	3.8 (1.5)	3.5 (1.5)
Carbohydrates from starchy vegetables, % energy ^{b,e}	4.2 (2.0)	4.2 (2.0)	4.2 (2.1)	4.2 (2.3)
Dietary fiber, g/day ^b	16.6 (4.5)	16.9 (4.6)	16.6 (4.5)	16.7 (4.7)
Fruit fiber, g/day ^b	3.4 (2.3)	3.5 (2.4)	3.6 (2.5)	3.6 (2.4)
Vegetable fiber, g/day ^b	6.2 (2.4)	6.3 (2.5)	6.3 (2.6)	6.3 (2.5)
Cereal fiber, g/day ^b	4.2 (2.2)	4.3 (2.3)	4.4 (2.4)	4.3 (2.4)
Ratio of total carbohydrate-to-fiber	12.2 (3.4)	12.0 (3.4)	12.0 (3.4)	12.0 (3.4)
Glycemic Index ^b	52.9 (3.3)	52.8 (3.3)	52.9 (3.4)	52.9 (3.7)
Glycemic Load ^b	98.6 (17.5)	98.9 (17.7)	99.6 (17.8)	99.2 (24.5)
Total energy (Kcal/d) ²	1760 (490)	1753 (490)	1751 (499)	1752 (492)
Total fat intake (% of total energy) ²	34.0 (5.2)	33.8 (5.3)	33.8 (5.3)	33.8 (5.3)
Total protein intake (% of total energy) ²	18.1 (3.0)	18.3 (3.0)	18.3 (3.0)	18.1 (3.0)
AHEI ²	44.9 (9.6)	45.3 (9.7)	45.9 (9.7)	45.5 (9.7)
Race, white, No. (%)	45090 (94.9)	58017 (94.7)	32060 (93.8)	77199 (94.5)
Married, No. (%)	41954 (88.3)	53790 (87.8)	29907 (87.5)	71481 (87.5)
Education				
Registered nurse, No. (%)	336867 (70.9)	46316 (75.6)	25942 (75.9)	60207 (73.7)
Bachelors, No. (%)	9122 (19.2)	11211 (18.3)	5571 (16.3)	14378 (17.6)
Master's or higher, No. (%)	4704 (9.2)	5575 (9.1)	2665 (7.8)	7107 (8.7)
Physical activity (MET-h/week) ²	12.5 (19.7)	12.4 (19.6)	12.0 (20.7)	12.2 (20.0)
BMI ³				
BMI < 25 kg/m ² , No. (%)	29601 (62.3)	37065 (60.5)	20747 (60.7)	50159 (61.4)
BMI 25 to <30 kg/m ² , No. (%)	12021 (25.3)	15990 (26.1)	9502 (27.8)	21648 (26.5)

BMI \geq 30 kg/m ² , No. (%)	5892 (12.4)	8209 (13.4)	3965 (11.6)	9885 (12.1)
Smoking status				
Never smoker, No. (%)	20336 (42.8)	26221 (42.8)	16064 (47.0)	36026 (44.1)
Past smoker, No. (%)	16297 (34.3)	21197 (34.6)	11655 (34.1)	28184 (34.5)
Current smoker, No. (%)	10880 (22.9)	13846 (22.6)	6460 (18.9)	17482 (21.4)
Postmenopausal hormone use				
Premenopausal	22759 (47.9)	24077 (39.3)	13672 (40.0)	35291 (43.2)
Never used, No. (%)	13874 (29.2)	19482 (31.8)	10903 (31.9)	25243 (30.9)
Former user, No. (%)	5797 (12.2)	8148 (13.3)	4546 (13.3)	10212 (12.5)
Current user, No. (%)	4276 (9.0)	8087 (13.2)	3350 (9.8)	7761 (9.5)
Current aspirin use (%)	33972 (71.5)	43375 (70.8)	24370 (71.3)	58246 (71.3)
Multivitamin use, No. (%)	17247 (36.3)	22606 (36.9)	12749 (37.3)	30389 (37.2)
Hypertension, No. (%)	7697 (16.2)	11028 (18.0)	5674 (16.6)	13397 (16.4)
High cholesterol, No. (%)	2566 (5.4)	3798 (6.2)	2017 (5.9)	4575 (5.6)

AHEI, Alternative Healthy Eating Index; BMI, body mass index; FFQ, food frequency questionnaire; METs, metabolic equivalent; Q, quintile; SD, standard deviation; SSB, sugar-sweetened beverage

a. Summary statistics include age-standardized means and standard deviations for continuous covariates (except for age) and proportions for categorical variables by quintiles of protein intake expressed in percent of total energy intake

b. Mean, SD (all such values)

eTable 2. Primary Contributors for Each Carbohydrate Variable

Carbohydrate intake variable	Primary dietary contributors
Total carbohydrates	Mashed potatoes, white bread, breakfast cereal, whole grain bread, orange juice, skim milk, apples, bananas, white rice, pizza, punch, pasta, pastries, soda, added sugar, yogurt, peaches, oranges, ice cream, jam, tomato sauce, cake, French fries, candy, corn, pancakes
Carbohydrates from whole grains	Breakfast cereal, whole grain bread, oatmeal/cooked oats, brown rice, popcorn, bran
Carbohydrates from fruits (excluding fruit juice)	Bananas, apples, oranges, raisins, grapefruit, cantaloupe, watermelon, peaches, strawberries, blueberries, processed foods (pies, cereals, yogurt)
Carbohydrates from vegetables (excluding potatoes and legumes)	Corn, tomatoes, carrots, broccoli, lettuce, tomato sauce, squash, cabbage, mixed vegetables, beets, cauliflower, brussels sprouts, pizza, spinach, celery
Carbohydrates from legumes	Beans, peas, mixed vegetables, nuts, peanut butter, processed foods, tofu
Carbohydrates from starchy vegetables	Summed intakes of carbohydrates from potatoes, corn, and yams
Carbohydrates from potatoes	Mashed potatoes, French fries, potato chips, chowder
High-quality carbohydrates	Summed intakes of carbohydrates from fruits (excluding fruit juice), vegetables (excluding potatoes and legumes), whole grains, and legumes
Refined carbohydrates	Mashed potatoes, bread, pasta, white rice, pizza, pastries, soda, added sugar, bread rolls, cake, yogurt, jam, French fries, ice cream, punch, pancakes, potato chips, candy, donuts,
Dietary fiber	Breakfast cereal, apples, whole grain bread, oranges, bananas, peas, tomatoes, carrots, lettuce, broccoli, beans, pizza, pasta, mixed vegetables, nuts, corn, cabbage, oatmeal/oats
Fiber from fruits	Apples, oranges, bananas, orange juice, strawberries, grapefruit, peaches, cantaloupes, prunes, raisins, blueberries, watermelon, fruit in pastries, apple juice, grapefruit juice
Fiber from vegetables	Peas, tomato sauce, carrots, tomatoes, beans, lettuce, broccoli, mixed vegetables, string beans, corn, cabbage, cauliflower, squash, spinach, pizza toppings, Brussels sprouts, yams, celery, beets, mushrooms
Fiber from cereals	Breakfast cereal, whole-grain bread, white bread, pasta, oatmeal/cooked oats, pastries, pizza, popcorn, bran, brown rice, pancakes, white rice
Glycemic Load	Mashed potatoes, white bread, breakfast cereal, whole grain bread, orange juice, bananas, white rice, pizza, pasta, pastries, punch, soda, apples, skim milk, pancakes, added sugar, peaches, jam, fruit juice, carrots, candy, French fries,
Total carbohydrate-to-fiber ratio	Total carbohydrates divided by dietary fiber

eTable 3. ORs (95% CIs) of Individual Domains of Healthy Aging According to Intake of Carbohydrates In 1984/1986 Among 47,513 Participants in the Nurses' Health Study Without Adjustment for BMI (ORs >1 denote greater odds of healthy aging)

	OR (95% CI) for specified energy increments				
	Absence of chronic diseases (n=15,056)	No memory impairments (n=23,196)	No physical function limitations (n=7,300)	Good mental status (n=18,204)	Healthy Aging (n=3,706)
Total Carbohydrates - per 10% energy increment					
Multivariate model 2 ^a	1.00 (0.97, 1.04)	1.04 (1.01, 1.08)	1.08 (1.03, 1.14)	1.07 (1.03, 1.11)	1.17 (1.10, 1.25)
Multivariate model – BMI ^b	1.08 (1.04, 1.11)	1.04 (1.01, 1.07)	1.14 (1.09, 1.20)	1.07 (1.04, 1.11)	1.20 (1.13, 1.27)
High-quality carbohydrates^c - per 10% energy increment					
Multivariate model 2 ^a	1.08 (1.04, 1.13)	1.08 (1.04, 1.12)	1.24 (1.17, 1.31)	1.17 (1.12, 1.22)	1.31 (1.22, 1.41)
Multivariate model – BMI ^b	1.11 (1.07, 1.16)	1.10 (1.07, 1.16)	1.29 (1.22, 1.36)	1.21 (1.16, 1.26)	1.37 (1.28, 1.47)
Refined carbohydrates^d - per 10% energy increment					
Multivariate model 2 ^a	0.92 (0.88, 0.97)	1.03 (0.98, 1.07)	0.91 (0.85, 0.97)	0.94 (0.90, 0.99)	0.87 (0.80, 0.95)
Multivariate model – BMI ^b	0.99 (0.95, 1.03)	1.00 (0.96, 1.04)	0.96 (0.92, 1.01)	0.94 (0.91, 0.98)	0.92 (0.86, 0.99)
Carbohydrates from whole grains - per 5% energy increment					
Multivariate model 2 ^a	1.10 (1.04, 1.15)	1.00 (0.96, 1.06)	1.10 (1.03, 1.18)	1.07 (1.02, 1.12)	1.11 (1.01, 1.21)
Multivariate model – BMI ^b	1.15 (1.10, 1.21)	1.03 (0.98, 1.08)	1.20 (1.12, 1.28)	1.12 (1.06, 1.17)	1.20 (1.10, 1.31)
Carbohydrates from fruits excluding fruit juice - per 5% energy increment					
Multivariate model 2 ^a	1.06 (1.03, 1.09)	1.06 (1.03, 1.10)	1.16 (1.11, 1.21)	1.11 (1.08, 1.15)	1.22 (1.15, 1.28)
Multivariate model – BMI ^b	1.07 (1.04, 1.10)	1.07 (1.04, 1.11)	1.18 (1.13, 1.22)	1.13 (1.09, 1.16)	1.23 (1.17, 1.30)
Carbohydrates from vegetables excluding potatoes and legumes - per 5% energy increment					
Multivariate model 2 ^a	0.95 (0.88, 1.04)	1.11 (1.02, 1.20)	1.31 (1.18, 1.46)	1.23 (1.14, 1.33)	1.37 (1.20, 1.57)
Multivariate model – BMI ^b	0.93 (0.86, 1.01)	1.14 (1.12, 1.21)	1.28 (1.15, 1.41)	1.24 (1.15, 1.34)	1.36 (1.20, 1.55)
Carbohydrates from starchy vegetables^e - per 5% energy increment					
Multivariate model 2 ^a	0.92 (0.87, 0.97)	1.00 (0.98, 1.01)	0.94 (0.87, 1.01)	1.02 (0.97, 1.08)	0.90 (0.82, 0.99)
Multivariate model – BMI ^b	0.93 (0.88, 0.98)	1.03 (1.00, 1.12)	0.94 (0.88, 1.01)	1.02 (0.97, 1.08)	0.90 (0.82, 0.99)
Carbohydrates from legumes - per 1% energy increment					
Multivariate model 2 ^a	0.99 (0.96, 1.02)	1.00 (0.98, 1.03)	1.03 (0.99, 1.07)	1.02 (0.99, 1.05)	1.06 (1.01, 1.12)
Multivariate model – BMI ^b	1.00 (0.98, 1.03)	1.01 (0.99, 1.04)	1.06 (1.02, 1.10)	1.04 (1.01, 1.07)	1.09 (1.04, 1.15)

BMI, body mass index; CI, confidence interval; METs, metabolic equivalent; OR, odds ratio

a. Multivariate model 2 was adjusted for baseline age (continuous), race (white, other), education (registered nurse, bachelor, or graduate), marital status (married, other), postmenopausal hormone use (pre-menopausal; never, past user, current user), smoking status (never smoked, former smoker, 0.1–14.9, 15.0–29.9, >30 pack-years), alcohol intake (0, 0.1–4.9, 5.0–14.9,

- >15.0g/d), physical activity (<3, 3-8.9, 9-17.9, 18-26.9, >27 METs/week), baseline history of hypertension or hypercholesterolemia (yes, no), aspirin use (never, past, current), multivitamin use (yes, no), total energy intake (kcal/day, quintiles), BMI (averaged 1984 and 1986 (<22.5, 22.5–24.9, 25.0–27.5, 27.5–30.0, 30.0–34.9, >35.0 kg/m²), and dietary protein.
- b. BMI model was adjusted for the covariates in multivariate model 2 excluding BMI
 - c. High-quality carbohydrates include Carbohydrates from fruits (excluding fruit juice), carbohydrates from vegetables (excluding potatoes and legumes), carbohydrates from whole grains, and carbohydrates from legumes.
 - d. Refined carbohydrates include carbohydrates from refined grains, potatoes, and added sugars.
 - e. Carbohydrates from starchy vegetables include carbohydrates from potatoes, corn, and yams.

eTable 4. ORs (95% CIs) of Healthy Aging (n=3,706) According to Intake of Carbohydrates Cumulatively Averaged Through 2002 or 2006 Among 47,513 Participants in the Nurses' Health Study (ORs >1 denote greater odds of healthy aging)

BMI, body mass index; CI, confidence interval; IQR, interquintile range; METs, metabolic equivalent; OR, odds ratio; Q, quintile

- a. Multivariate model 1 was adjusted for baseline age (continuous), race (white, other), education (registered nurse, bachelor, or graduate), marital status (married, other), postmenopausal hormone use (pre-menopausal; never, past user, current user), smoking status (never smoked; former smoker, 0.1–14.9, 15.0–29.9, >30 pack-years), alcohol intake (0, 0.1–4.9, 5.0–14.9, >15.0g/d), physical activity (<3, 3–8.9, 9–17.9, 18–26.9, >27 METs/week), baseline history of hypertension or hypercholesterolemia (yes, no), aspirin use (never, past, current), multivitamin use (yes, no), BMI (averaged 1984 and 1986; <22.5, 22.5–24.9, 25.0–27.5, 27.5–30.0, 30.0–34.9, >35.0 kg/m²), and total energy intake (kcal/day, quintiles). Intakes of alcohol and total energy were cumulatively averaged for the respective analyses of 2002 or 2006 cumulatively averaged protein variables.
- b. Multivariate model 2 included covariates in multivariate model 1 with additional adjustment for dietary protein.
- c. *P*-trend was calculated by assigning median values to each quintile and was treated as a continuous variable.
- d. High-quality carbohydrates include Carbohydrates from fruits (excluding fruit juice), carbohydrates from vegetables (excluding potatoes and legumes), carbohydrates from whole grains, and carbohydrates from legumes.
- e. Refined carbohydrates include carbohydrates from refined grains, potatoes, and added sugars.

BMI, body mass index; CI, confidence interval; METs, metabolic equivalent; OR, odds ratio

- Multivariate model 1 was adjusted for baseline age (continuous), race (white, other), education (registered nurse, bachelor, or graduate), marital status (married, other), postmenopausal hormone use (pre-menopausal, never, past user, current user), smoking status (never smoked, former smoker, 0.1–14.9, 15.0–29.9, >30 pack-years), alcohol intake (0, 0.1–4.9, 5.0–14.9, >15.0g/d), physical activity (<3, 3–8.9, 9–17.9, 18–26.9, >27 METs/week), baseline history of hypertension or hypercholesterolemia (yes, no), aspirin use (never, past, current), multivitamin use (yes, no), total energy intake (kcal/day, quintiles). Intakes of alcohol and total energy were cumulatively averaged for the respective analyses of 2002 or 2006 cumulatively averaged carbohydrate variables.
- Multivariate model 1 was additionally adjusted for BMI (averaged 1984 and 1986; <22.5, 22.5–24.9, 25.0–27.5, 27.5–30.0, 30.0–34.9, >35.0 kg/m²).
- Multivariate model 2 included covariates in multivariate model 2 with additional adjustment for dietary protein.
- Multivariate model 3 included covariates in multivariate model 2 with further adjustment for dietary fiber.

eTable 12. ORs (95% CIs) of Healthy Aging Associated With Isocaloric Substitution of Carbohydrate (Total, High-Quality, or From Whole Grains) for Other Macronutrients Modeled in 5%-Energy Increments in 47,513 Participants in the Nurses' Health Study (ORs >1 denote greater odds of healthy aging)

	OR (95% CI) 5%-energy increment from carbohydrates ^{a,b}				
	Healthy Aging (n=3,706)	Absence of chronic diseases (n=15,056)	No memory impairments (n=23,196)	No physical function limitations (n=7,300)	Good mental status (n=18,204)

BMI, body mass index; CI, confidence interval; METs, metabolic equivalent; OR, odds ratio; PUFA, polyunsaturated fat

- The isocaloric substitutions can be interpreted as the association of increasing the calories contributed by a given dietary carbohydrate variable by 5% energy per day while decreasing the corresponding calories contributed by dietary protein, dietary fat, or other dietary carbohydrate variables on the odds of healthy aging.
- All models adjusted for baseline age (continuous), race (white, other), education (registered nurse, bachelor, or graduate), marital status (married, other), postmenopausal hormone use (pre-menopausal; never, past user, current user), smoking status (never smoked, former smoker, 0.1–14.9, 15.0–29.9, >30 pack-years), alcohol intake (0, 0.1–4.9, 5.0–14.9, >15.0g/d), physical activity (<3, 3–8.9, 9–17.9, 18–26.9, >27 METs/week); BMI (averaged 1984 and 1986; <22.5, 22.5–24.9, 25.0–27.5, 27.5–30.0, 30.0–34.9, >35.0 kg/m²), baseline history of hypertension or hypercholesterolemia (yes, no); aspirin use (never, past, current); multivitamin use (yes, no) and total energy intake (kcal/day, continuous).
- The OR (95% CI) for *trans* fat replacement are expressed in 1% calories per day increment.
- High-quality carbohydrates include Carbohydrates from fruits (excluding fruit juice), carbohydrates from vegetables (excluding potatoes and legumes), carbohydrates from whole grains, and carbohydrates from legumes.
- Refined carbohydrates include carbohydrates from refined grains, potatoes, and added sugars.

eTable 13. ORs (95% CIs) of Healthy Aging According to Baseline (1984/1986) Total Carbohydrate Intake and Glycemic Load Stratified by GI and AHEI Among 47,513 Participants in the Nurses' Health Study^a

AHEI, Alternative Healthy Eating Index; BMI, body mass index; CI, Confidence Interval; METs, metabolic equivalent; OR, odds ratio;

- a. All models adjusted for baseline age (continuous), race (white, other), education (registered nurse, bachelor, or graduate), marital status (married, other), postmenopausal hormone use (pre-menopausal; never, past user, current user), smoking status (never smoked; former smoker, 0.1–14.9, 15.0–29.9, >30 pack-years), alcohol intake (0, 0.1–4.9, 5.0–14.9, >15.0g/d), physical activity (<3, 3-8.9, 9-17.9, 18-26.9, >27 METs/week); BMI (averaged 1984 and 1986; <22.5, 22.5–24.9, 25.0–27.5, 27.5–30.0, 30.0–34.9, >35.0 kg/m²), baseline history of hypertension or hypercholesterolemia (yes, no); aspirin use (never, past, current); multivitamin use (yes, no) and total energy intake (kcal/day, continuous). The OR is per 5%-energy increment for total carbohydrates and per interquintile range for Glycemic Load.
- b. Median participant age in 1984 was 48.0 years; median; glycemic index for 1984/1986 was 53.0; median AHEI averaged for 1984/1986 was 44.2, median dietary fiber intake averaged for 1984/1986 was 16.0 grams per day.
- c. The OR (95% CI) for total carbohydrate intake are expressed in 10%-energy increments.
- d. The OR (95% CI) for dietary glycemic load are expressed in interquintile range increments.

eTable 14. ORs (95% CIs) of Healthy Aging (n = 3,706) Assessed in 2014/2016 According to the Dietary Glycemic Load Cross-Classified by Total Dietary Fiber Levels Assessed in 1984/1986 Among 47,513 Participants in the Nurses' Health Study

(ORs >1 denote greater odds of healthy aging)

	ORs (95% CI) for comparing high vs. low levels of the dietary GL ^a				
	Absence of chronic diseases (n=15,056)	No memory impairments (n=23,196)	No physical function limitations (n=7,300)	Good mental status (n=18,204)	Healthy Aging (n=3,706)
Low GL/Low fiber ^b	1.00 (ref)	1.00 (ref)	1.00 (ref)	1.00 (ref)	1.00 (ref)
High GL/Low fiber ^b	0.95 (0.90, 1.02)	0.98 (0.92, 1.05)	0.88 (0.80, 0.95)	0.97 (0.91, 1.03)	0.91 (0.81, 1.01)
