

Biomarker	Original Image	Molecular Weight
B-actin	 Western blot image for B-actin. The image shows five lanes. On the left side, there are several horizontal bands of varying intensity, representing a molecular weight marker. In the main area of the blot, there is a single, prominent horizontal band at approximately 43 KDa, which is consistent across all five lanes.	43 KDa
TGF-β	 Western blot image for TGF-β. The image shows five lanes. On the left side, there are several horizontal bands of varying intensity, representing a molecular weight marker. In the main area of the blot, there is a single, prominent horizontal band at approximately 17 KDa, which is consistent across all five lanes.	17 KDa
